

Twinkle Children's Hospital — user guide

For the front desk, the doctor, and the pharmacy counter.

Every screenshot here is taken from the running application. To refresh them after a change, run the one test that produces them:

```
dotnet test tests/Pharma.UiTests --filter ScreenshotCapture
```

Contents

1. Before the first patient
2. The OPD desk
3. Seeing a patient
4. Medicines and stock
5. The pharmacy counter
6. Printing and reprinting
7. Patient records
8. End of day
9. Backups, logs, and problems

1. Before the first patient

Open **Settings** and fill in the clinic's details. These print on every bill, receipt and prescription, so get them right once.

Field	Why it matters
Clinic name, address, phone	Heading of every printed document
GSTIN	Required on a tax invoice
Drug licence no	Required on a retail chemist's bill
Pharmacist	Printed at the foot of the bill
OPD queue layout	Tiles or rows — see section 2

Below that, add your **doctors**. At least one is needed before any visit can be booked. The consultation fee entered here becomes the default when booking.

The app works with these left blank — the GSTIN line simply won't print — but fill them in before issuing a real bill.

2. The OPD desk

The screen shows one day at a time. **Waiting** on the left, **Completed** on the right, and a tab for each doctor across the top. Pick a doctor's tab to see only their patients, or **All doctors** for the whole clinic.

Each waiting patient shows their token number, name, age and sex, the time they were booked, what they came in with, whether the fee has been taken, and how long they have been waiting.

Booking a visit

Click **+ New visit**.

Three steps, in order:

1. **Find the patient.** Type a name or a phone number and press Enter. If the family already exists, everyone on that number is listed — **select the child who is actually here.** If nobody matches, the new-patient form opens with what you typed already filled in.
2. **Doctor and time.** The doctor defaults to whichever tab you were on, and the fee to that doctor's usual charge.
3. **Complaint,** if you want it on the queue tile and the prescription.

Then **Book visit.** A token number is allocated automatically.

One phone, several children. A parent's number covers the whole family. Typing it lists every child registered against it, in any format — 9008007001 , +91 90080 07001 and 90080 07001 all find the same family. If you click **Book visit** without picking one, the app stops you rather than creating a duplicate child.

Taking the consultation fee

Click **Fee** on the patient's tile. A numbered receipt (RCP00001) is issued and the print preview opens. The badge on the tile changes to **Fee paid**.

Change the payment method in the **Fee taken as** box in the booking panel before clicking Fee. Clicking Fee twice does nothing — it will not issue a second receipt.

Moving a patient to Completed

Three ways, all equivalent:

- **Done** on the tile — for a patient who left without a full consultation
- Finishing a consultation with **Save & complete**
- **Reopen** on a completed tile moves them back to waiting

Choosing tiles or rows

Set this in Settings. Tiles are easier to read across a room; rows fit more people on screen when the clinic is busy. Everything works the same either way.

3. Seeing a patient

Click **Consult** on the tile.

Fee Review on

300.0

Prescription + Add line

MEDICINE	DOSE	FREQUENCY	DAYS	QTY	INSTRUCTIONS
	1 tab	1-0-1	3	0	X

Type the medicine name, or pick one from the catalogue so the pharmacy can load it into a bill directly.

Save Print prescription Save & complete

Vitals on the left, prescription on the right. Nothing is compulsory — record what you actually took.

For each prescription line, pick the medicine from the catalogue where you can, rather than typing it free-hand. That lets the pharmacy pull the prescription straight onto a bill.

At the bottom:

- **Save** — keeps the notes, patient stays in the waiting column
- **Print prescription** — saves, then opens the preview
- **Save & complete** — saves and moves the tile to Completed

4. Medicines and stock

The screenshot shows a web application interface for managing medicines. On the left is a dark sidebar with navigation links: OPD, Patients, Pharmacy counter, Medicines (highlighted), Reports, and Settings. The main area is titled 'Medicines' and shows '1 medicine(s) listed'. It features a search bar with 'Amoxyclav Drops 15ml' entered, a '+ New medicine' button, and a table with columns: MEDICINE, PACK, MAKER, RACK, GST %, SCH, and STOCK. The table contains one entry: Amoxyclav Drops 15ml, with GST % 12.0, SCH None, and STOCK 40. To the right of the table are two forms. The top form is for adding a new medicine, with fields for Manufacturer, Pack size, HSN (3004), GST % (12), Schedule (None), Rack, Reorder level (0), and an 'Active' checkbox. A 'Save medicine' button is at the bottom. The bottom form is titled 'Add stock to the selected medicine' and includes fields for Batch no, Expiry (26-07-2028), Qty (0), Free (0), Rate (0), MRP (0), Supplier, and Supplier bill no. An 'Add stock' button is at the bottom. A footer note states: 'Data is stored on this PC. A backup is taken each day it is opened.'

The catalogue is on the left, two forms on the right.

Medicine details — name, manufacturer, pack size, HSN code, GST rate, schedule (H, H1, X), rack location and reorder level. Only the name is required.

Add stock — this is the *only* way stock enters the system, and it always creates a batch:

Field	Notes
Batch no	Printed on the pack. Required — it goes on the bill by law
Expiry	The pack is good until the end of that month
Qty / Free	Free is the scheme quantity, the "+1" in 10+1. It adds to stock
Rate	What the hospital pays
MRP	What the customer pays. The counter prices from this

Price and expiry belong to the batch, not the medicine. Two deliveries of the same drug can have different MRPs and different expiry dates, and the bill has to show what was actually handed over. That is why there is no single "price" field on a medicine.

5. The pharmacy counter

Per line, three steps: **find the medicine, set the quantity, add.**

Type part of the name and press Enter. Pick from the list — it shows the pack, maker, rack and how many are in stock. The **nearest-expiry batch with stock is selected for you**, which is the order stock should leave the shelf in.

Set the quantity, optionally a line discount, then **Add to bill**.

The totals on the right update as you go:

Gross	what the MRP comes to
Discount	anything taken off
Taxable value	the MRP with GST taken back out of it
CGST + SGST	the tax, split in half
Round off	to the nearest rupee
NET PAYABLE	what the customer hands over

MRP already includes GST. Tax is never added on top. Ten strips at ₹112 MRP come to exactly ₹1,120 — of which ₹1,000 is the taxable value and ₹120 is GST. If you have ever seen software bill this as ₹1,254, that is the mistake this avoids.

To dispense a prescription, choose the patient under **Or pull today's OPD prescription** and click **Load prescription** — every prescribed medicine that is in stock lands on the bill. Anything missing is named so you can tell the parent.

Finish with **Save & print bill**, or **Save without printing**. The counter clears itself for the next customer.

The app refuses to sell more than you have, and refuses expired batches.

6. Printing and reprinting

Every document previews before anything reaches paper.

Use **Print** to send it, or **Close** to go back. If no printer is set up the app says so plainly rather than failing — you can still preview.

Three documents:

Document	Number	Where from
Tax invoice (medicines)	INV00001	Counter, Reports day book, patient record
Consultation receipt	RCP00001	OPD tile, patient record
Prescription	V00001	Consultation window, OPD tile, patient record

Anything can be reprinted at any time, however long ago it was. A reprint is stamped **DUPLICATE** so it cannot be mistaken for the original.

7. Patient records

The screenshot shows the Twinkle Children's Hospital OPD & Pharmacy app interface. On the left is a dark sidebar with navigation options: OPD, Patients (selected), Pharmacy counter, Medicines, Reports, and Settings. The main area is titled 'Patients' and shows '3 patient(s) listed'. A search bar contains 'Baby Anika' with a 'Search' button and a '+ New patient' button. Below the search bar is a table with columns: PATIENT NO, NAME, PHONE, AGE, SEX, and ALLERGIES. The table contains one entry: P00001, Baby Anika, 9008007001, 4, Male. To the right of the table is a 'Patient details' section with fields for Patient no (P00001), Name (Baby Anika), Phone (9008007001), Age (4), Sex (Male), Address, and Allergies. Below these fields are 'Save patient' and 'Remove' buttons. At the bottom of the main area, there are two tabs: 'Visits & prescriptions' (selected) and 'Medicine bills'. The 'Visits & prescriptions' tab shows a table with columns: DATE, VISIT NO, DOCTOR, I, RX, FEE, RECEIPT, and STATUS. The table contains one entry: 26 Jul 2026 09:00, V00001, Dr. A. Kumar, 0, 300.00, RCP00001, InConsultation. Below this table are 'Print prescription' and 'Print fee receipt' buttons. A small note at the bottom left of the sidebar states: 'Data is stored on this PC. A backup is taken each day it is opened.'

Search by name, patient number, or phone. Selecting a patient shows their details on the right and their whole history below, in two tabs:

- **Visits & prescriptions** — every visit, with diagnosis, receipt number and buttons to print the prescription or the fee receipt
- **Medicine bills** — every bill, with a button to print it again

This is where you go when someone comes back weeks later having lost a receipt. A patient who has visits on record cannot be deleted.

8. End of day

Across the top: pharmacy sales, split by cash and UPI, consultation fees collected, and the number of OPD visits.

Six tabs below:

Tab	What it is for
Day book	Every bill for the day. Also searches all dates by bill number or customer name
GST summary	Taxable value, CGST and SGST grouped by rate — what a return needs
OPD register	Every visit, diagnosis, fee and whether it was paid
Expiring soon	Batches within 90 days of expiry — return these to the distributor
Low stock	Anything at or below its reorder level
Schedule H1 register	Statutory record of H1 sales. Keep for three years

9. Backups, logs, and problems

Your data lives in one file: `C:\ProgramData\TwinkleHMS\twinkle.db` . Copy that file and you have copied the clinic.

Backups happen automatically — one copy per day into `C:\ProgramData\TwinkleHMS\backups` , keeping the last 14. That protects against mistakes, not against the PC dying. **Copy the folder to a pen drive weekly.**

If something goes wrong, the app tells you what happened and keeps running rather than closing on you. Every error is written to `C:\ProgramData\TwinkleHMS\logs` . Settings has an **Open log folder** button — send that day's file when reporting a problem.

Things the app deliberately refuses

It says	Because
"Only 5 left of ..."	You cannot sell stock you do not have
"Batch ... expired on ..."	Expired medicine cannot be dispensed
"3 people match that. Select which one"	Siblings share a phone; picking the wrong child is worse than a second click
"This patient has visits on record"	Deleting them would orphan their bills
"No MRP" on import	The counter prices from MRP and cannot sell without one

Not in this version

Sales returns and credit notes, purchase returns, inter-state IGST, e-invoicing, multi-terminal use, and the Schedule X narcotic register.

The GST arithmetic and the invoice layout are correct for a retail counter, but this is not a certified e-invoicing integration. Have a CA review the GST summary before it feeds a return, and confirm register formats with your local drug inspector.
