

Twinkle Children's Hospital

User guide

For the front desk, the doctor, and the pharmacy counter.

Every screenshot is taken from the running application. To refresh them all after a change, run the one test that produces them:

```
dotnet test tests/Pharma.UiTests --filter ScreenshotCapture
```

Contents

Getting started

1. The window
2. Settings — set this up first

The OPD desk 3. The OPD screen 4. Booking a visit 5. The consultation

The pharmacy 6. Medicines — the catalogue 7. Inventory — what is on the shelf 8. Importing a supplier bill 9. The pharmacy counter

Everything else 10. Patients 11. Reports 12. Printing 13. What the system will and will not do 14. When something goes wrong

Common tasks, step by step — the short version of everything above. Start here if you just want to get through a day.

Common tasks, step by step

Each task below is complete on its own. Screen-by-screen detail follows in sections 1 to 14.

A. Set the clinic up — once, before anything else

1. Click **Settings**.
2. Fill in **clinic name**, **address**, **phone**.
3. Tick **Registered for GST** only if the clinic actually is. Then enter the **GSTIN**. Leave it unticked and bills print as a plain invoice.
4. Enter the **drug licence number** and the **pharmacist's name**.

5. Click **Save shop details**.
6. On the right, enter the first **doctor** — name, speciality, registration number, usual fee — and click **Save doctor**.

You cannot book a visit until at least one doctor exists.

B. Book a walk-in patient

1. Click **OPD**, then **+ New visit**.
2. Type the patient's **name or phone number** and press Enter.
3. If they are listed, **click the right person**. If a whole family shares the phone, everyone on it appears — pick the child who is actually here.
4. If nobody matches, the new-patient form opens. Enter **name, phone, age, sex**.
5. Choose the **doctor**, adjust **time** and **fee** if needed.
6. Type the **complaint** if you want it on the tile and the prescription.
7. Click **Book visit**. A token number is allocated.

C. Take the consultation fee

1. On the **OPD** screen, find the patient's tile in **Waiting**.
2. Set **Fee taken as** to Cash, UPI or Card.
3. Click **Fee** on the tile.
4. The receipt preview opens — click **Print**, or **Close** to skip printing.

The badge changes to **Fee paid**. Clicking Fee twice does nothing.

D. See a patient and write a prescription

1. Click **Consult** on the patient's tile.
2. Fill in **vitals, complaint, diagnosis, advice** — all optional.
3. For each medicine:
 - Type two letters or more into **Medicine**.
 - **Click a match** to use one you stock, or keep typing for one you do not.
 - Enter the **dose**.
 - Set **Morning · Afternoon · Night** from the three lists — **0**, **1/4**, **1/2**, **1** or **2**. One in the morning and one at night is **1**, **0**, **1**.
 - Enter **days**.
 - **Qty is filled in for you** in individual tablets — change it if you want.
 - Click **Add**.
4. Set a **review date** if there is one.
5. Click **Save & complete**. The tile moves to **Completed**.

The consultation covers the whole window while it is open, and the rest of the app waits behind it. Nothing else can be started until you leave, so a consultation cannot be opened and then forgotten. **Close** or the **Esc** key leaves it; if anything has been typed and not saved you are asked first.

E. Add a new medicine and put stock on the shelf

This is two jobs on two screens. **Medicines** is where a medicine is described, once. **Inventory** is where stock arrives, every delivery.

First, describe the medicine — Medicines screen

1. Click **Medicines**, then **+ New medicine**.
2. Enter the **brand name** as printed on the pack — *Calpol*.
3. Enter the **drug / generic name** — *Paracetamol 250mg*. Staff search by either, so filling both is worth the few seconds.
4. Enter the **manufacturer** and **pack size** as printed.
5. Set **Sold as** — tablet, capsule, bottle, sachet.
6. Set **Units in one pack** — **15** for a strip of fifteen, **1** for a bottle.
7. Set **GST %**, **schedule**, **rack** and **reorder level**.
8. Click **Save medicine**.

Then, put stock on the shelf — Inventory screen

9. Click **Inventory**, type the name in the search box and click **Search**.
10. Click the medicine in the list. The heading names it and says how much is on hand.
11. In **Receive stock**, enter **batch no**, **expiry**, **packs received**, any **free** packs, the **rate** you paid and the **MRP** printed on the pack.
12. Check the line that appears — *"20 pack(s) × 15 = 300 tablets onto the shelf"*.
13. Click **Add stock**.

F. Load a supplier's file instead of typing it

1. Click **Inventory**, then **Import supplier bill**.
2. Choose the **supplier profile** that matches their format.
3. Click **Browse...** and pick the file. It is read immediately.
4. Type the **supplier name** — the file does not contain it.
5. Check the grid, especially **PER PACK**. **30s** reads as 30; **60ML** stays 1. **Type the real number for any strip.**
6. Read the notices underneath — bill date, MRP changes, anything unclear.
7. Click **Import**.

Stock is **added** to what is already there. The same bill cannot be imported twice.

G. Sell to someone who walks in

1. Click **Pharmacy counter**.
2. Type part of the medicine name. It filters as you type, in any case.
3. **Click the medicine** in the results.
4. Enter **How many**, and check the unit beside it says what you mean — *tablets* or *strips of 10*.
5. Click **Add to bill**. Repeat for each medicine.
6. Leave the customer as **Cash**, or type their name.
7. Choose **Payment**, then **Save & print bill**.

H. Sell part of a strip

Exactly as task G. Nine tablets out of a strip of ten is **9** with the unit on **tablets** — the bill line then reads **0 x 10 TAB + 9 tablets** so you can see what to hand over.

The price is proportional: a strip of ten at ₹120 makes each tablet ₹12, so nine is ₹108. **A full strip always costs exactly the MRP printed on it** — the arithmetic never drifts by a few paise.

Switch the unit to **strips of 10** and type **2** when someone wants whole strips; it becomes 20 tablets.

If the unit only offers "units"

That medicine has **Units in one pack** set to 1, so the software believes one strip is one tablet — and nine tablets will be charged as nine strips. **Settings → Check data health** finds every medicine in that state and fixes them together. See task N.

I. Dispense what a doctor prescribed

1. Click **Pharmacy counter**.
2. Under **Or pull today's OPD prescription**, choose the patient.
3. Click **Load prescription**. Everything prescribed **and in stock** is added with the right quantity.
4. Anything missing is named on screen — tell the parent to buy it outside.
5. Choose **Payment**, then **Save & print bill**.

J. Correct a stock count

1. Click **Inventory** and select the medicine.
2. In **Correct the stock count**, choose the **batch**.
3. Enter the **true count** — what is actually on the shelf, in units.
4. Choose a **reason**: recount, breakage, expired, lost, entry error.
5. Add a **note** if it is unusual.
6. Click **Correct count**.

Every correction is recorded underneath with was, now and why.

K. Print something again, however long ago

1. Click **Patients** and search by name or phone.
2. Select the patient.
3. **Visits & prescriptions** tab → select the visit → **Print prescription** or **Print fee receipt**.
4. **Medicine bills** tab → select the bill → **Print bill**.

For a walk-in with no patient record: **Reports** → **Day book** → **Find any bill**, search the bill number or customer name across all dates, then **Reprint**.

L. Close the day

1. Click **Reports**.
2. Check the totals along the top — pharmacy sales, cash, UPI, fees collected.
3. **Day book** — every bill of the day.
4. **GST summary** — only if registered.
5. **Expiring soon** — return these to the distributor.
6. **Low stock** — what to order.
7. **Stock to reconcile** — anything added at the counter without a supplier bill. Match each to the bill when it arrives.
8. **Schedule H1 register** — keep for three years.

M. Sell something the system says you do not have

1. At the **Pharmacy counter**, find the medicine and click it.
2. Click **Stock came in — add it**.
3. Enter **packs on the shelf** and the **MRP**. Everything else is optional.
4. Click **Add to shelf** and carry on with the bill.

It appears under **Reports** → **Stock to reconcile** until you match it to the supplier bill.

N. Put the medicine records right

Do this **once**, before you rely on the counter. It is the difference between nine tablets costing ₹108 and costing ₹1,080.

1. Click **Settings**, then **Check data health**.
2. Read the list. Each row says what is wrong, what it will become, and what happens to the stock figure.
3. Leave the ticks as they are and click **Put the ticked ones right**.

What it finds	What it means
Pack size disagrees	The pack says 15 but the medicine says 1 per pack, so the counter sells whole strips to anyone asking for tablets. Fixing it re-counts 59 strips as 885 tablets — the same packs on the shelf
Old stock at a different pack size	Stock received before the medicine was corrected. Re-counted to match
Sold-as not set	Quantities read "units" instead of tablets. Taken from what is printed on the pack
Duplicate — fix by hand	The same medicine twice. Press Merge... on the row

Every re-count writes a line in **Inventory** → **Recent corrections**, so nothing changes quietly.

Before you tick a re-count, check one thing

"59 → 885" is right **only if the 59 means 59 strips**. If it means 59 loose tablets, untick that row — it would multiply your stock by fifteen.

O. Merge a medicine that appears twice

1. **Settings** → **Check data health**.
2. Find the row marked **Duplicate** and click **Merge...**
3. Confirm.

Its batches, purchases, sales and prescriptions all move to the record holding the most stock, and the empty one is retired. Nothing is deleted.

You will not be able to create a new duplicate — the same brand, maker and pack is refused, and you are offered the existing one instead.

1. The window

Seven screens down the left. The one you are on is highlighted.

Button	What it is for
OPD	The day's queue. Book visits, take fees, open consultations
Patients	Everyone ever registered, with their whole history
Pharmacy counter	Selling medicines
Medicines	The catalogue — what each medicine is. Set up once

Button	What it is for
Inventory	Stock — what is on the shelf. Receiving, batches, corrections
Reports	End of day, GST, expiry, low stock
Settings	Clinic details, doctors, screen layout

Medicines and Inventory are deliberately separate. Describing a medicine is a one-off job usually done by whoever sets the shop up; receiving stock happens every delivery and is done at the counter. Keeping them apart means neither screen is crowded with the other's fields.

Some screens — the consultation, importing a bill, a print preview — cover the window while they are open, and the rest of the app waits behind them. This is on purpose: nothing can be half-started and then forgotten.

The heading of every screen shows the screen name and a one-line summary underneath — for example "2 waiting · 1 completed · Sun, 26 Jul".

At the bottom left it reminds you where the data lives and that a backup is taken each day the application is opened.

2. Settings — set this up first

Everything here prints on your bills, receipts and prescriptions.

Twinkle Children's Hospital — OPD & Pharmacy

Settings
Shop details printed on bills and prescriptions

Shop details
These appear on every printed bill and prescription. GSTIN and the drug licence number are required on a retail chemist's tax invoice.

Shop details (left card)

Control	What to enter
Clinic / shop name	Printed largest, at the top of every document
Address	One line, under the name
Phone	Shown beside the address
Registered for GST	Off by default. See below — this changes what your bills are
GSTIN	Your GST number. Only enabled when registered
Drug licence no	Your 20B/21B number. Required on a chemist's bill
Pharmacist	Printed at the foot of the bill
OPD queue layout	Tiles or Rows — see section 3
Bill footer	Free text at the bottom of a bill, e.g. "Get well soon"
Save shop details	Applies everything above. New documents use it immediately

Below the button it shows the **database file** and the **activity log** path, with an **Open log folder** button. You need those only if reporting a problem.

The application works with these blank — the GSTIN line simply does not print. Fill them in before you issue a real bill to a customer.

Registered for GST, or not

This one setting changes what your bills legally are.

	Registered off	Registered on
Bill is headed	INVOICE	TAX INVOICE
GSTIN printed	no	yes
GST charged	none	extracted from the MRP
GST column and summary	hidden	shown

It is **off by default on purpose**. Issuing a document headed "tax invoice", with a GSTIN on it, when you are not registered is a false statement — so switching it on has to be a deliberate act.

Turning it on later does not rewrite old bills. Each bill remembers what it was when it was issued, so a reprint always shows what the customer was given.

Doctors (right card)

Control	What it does
List	Every doctor. Click one to edit it
Name	Appears as an OPD tab and on the prescription
Speciality	Printed under the doctor's name on the prescription
Registration no	Printed on the prescription. Required on a real one
Default consultation fee	Fills in automatically when booking for this doctor
Save doctor	Saves the one being edited
+ New doctor	Clears the form to add another

At least one doctor is needed before any visit can be booked.

3. The OPD screen

Top row

Control	What it does
All doctors tab	Shows every patient in the clinic
Doctor tabs	One per doctor. Shows only their patients
+ New visit	Opens the booking panel on the right
Date	Which day you are looking at. Defaults to today

The doctor is a tab rather than a column on each patient, which is why the tiles stay small.

The two columns

Waiting — everyone still to be seen. **Completed** — everyone finished.

A patient moves from one to the other and can be moved back.

What a waiting tile shows

On the tile	Meaning
Green number	Token number. What you call out
Name	The patient
4F • 08:55	Age, sex, and the time they were booked
Grey line	What they came in with
Fee paid / Fee due	Green if the consultation fee is taken, amber if not
just arrived / waiting 12m	How long they have been sitting there

Buttons on a waiting tile

Button	What it does
Consult	Opens the consultation window for this patient
Fee	Takes the consultation fee, issues a numbered receipt, offers to print it
Done	Moves the tile to Completed without a consultation
Cancel	Cancels the visit. Asks first

Buttons on a completed tile

Button	What it does
Rx	Prints the prescription. Says so if there isn't one
Receipt	Prints the fee receipt again, marked DUPLICATE
Reopen	Moves the patient back to Waiting

Choosing tiles or rows

Set in Settings. Tiles are easier to read across a room; rows fit more people on screen when the clinic is busy. **Everything works the same in either.**

4. Booking a visit

Click **+ New visit**. The panel opens on the right, in three numbered steps.

Step 1 — find the patient

Control	What it does
Search box	Type a name or a phone number. Enter also works
Find	Runs the search
Results list	Everyone matching. Click the right one
+ New patient	Opens the form below to register someone new

If nobody matches, the new-patient form opens by itself with what you typed already filled in.

New patient field	Notes
Name	The only one that is required
Phone	The parent's number. Shared across siblings is normal
Age	In years
Sex	Male, Female or Other
Back to search	Returns to the list without adding anyone

Step 2 — doctor and time

Control	Notes
Doctor	Defaults to whichever tab you were on
Time	24-hour, e.g. 09:45 . Defaults to now
Fee	Defaults to that doctor's usual charge

Step 3 — complaint

Optional. Whatever you type shows on the queue tile and on the prescription.

Then **Book visit**. A token number is allocated automatically and the panel closes. **Fee taken as** below the button sets the payment method used when you later click **Fee** on the tile.

One phone, several children

A parent's number covers the whole family. Typing it lists **every child** registered against it, and the message says so: *"3 people are registered on this number. Select which one is here."*

The number is matched on its digits, so 9008007001 , +91 90080 07001 and 90080 07001 all find the same family.

If you click **Book visit** without choosing one, the application **stops you** rather than quietly registering a fourth child who already exists.

5. The consultation

Click **Consult** on a tile.

The heading shows the token, the patient, their age and sex, and the doctor.

Left — clinical notes

Control	Notes
Weight kg, BP, Temp °F	Vitals. All optional
Complaint	Carried over from booking; edit freely
Diagnosis	Printed in bold on the prescription
Advice / notes	Printed under the medicines
Fee	Can be changed here
Review on	Follow-up date. Printed as "Review on 01 Aug 2026"

Right — the prescription

Fill the form at the top and press **Add**. Each medicine then appears in the list below.

Control	Notes
Medicine	Type two letters or more to search our pharmacy. Matches appear underneath — click one to use it

Control	Notes
Dose	e.g. 5 ml , 1 tab
Morning · Afternoon · Night	Three lists: 0 , 1/4 , 1/2 , 1 , 2 . Pick how many at each time of day
Days	Length of the course
	<i>Nothing is filled in for you — a dose is the doctor's decision, not the software's</i>
Qty (units)	Individual tablets. Worked out for you — change it if you want
Grey line under the fields	What the course comes to, in tablets and in strips
Instructions	e.g. "after food". Printed under the line
Add	Adds the medicine to the list
✕ in the list	Removes that medicine

The three lists replace the old typed frequency box. **1-0-1** was quick for anyone who already knew the notation and a guess for everyone else; picking from three lists cannot be mistyped, and the prescription still prints in the familiar **1-0-1** form.

Frequency and days are **kept after adding**, because a prescription usually repeats the same course — only the medicine changes.

Quantity is always in individual units

You pick **1** , **0** , **1** for **3** days and it fills in **6** — six tablets, not six strips. The line underneath shows what the pharmacy will hand over, e.g. "6 units · 1 × 10 TAB minus 4", so there is never any doubt about whether a number means tablets or strips.

SOS and **PRN** have no fixed daily dose, so nothing is filled in and you type the quantity yourself.

Prescribing something the clinic does not stock

Type the name and simply **do not pick anything from the list**. The line reads "Not in our pharmacy — it will be written on the prescription only", and it is added exactly as typed. The parent buys it from an outside chemist.

It is never added to our medicine records. A name typed on a prescription does not create a medicine, a batch, or a price — our catalogue only ever grows when stock is received.

A medicine you **do** pick from the list shows "In our pharmacy · 60 in stock" and can be pulled straight onto a bill at the counter, with the quantity already correct. One prescription can mix the two freely.

Bottom buttons

Button	What it does
Close	Leaves the consultation. Asks first if anything is unsaved
Save	Keeps everything. Patient stays in Waiting
Print prescription	Saves, then opens the print preview
Save & complete	Saves and moves the tile to Completed

The **Esc** key does the same as **Close**. While the consultation is open the rest of the app is greyed out and waits — you cannot wander off to another screen with a half-written prescription behind you.

6. Medicines — the catalogue

What each medicine **is**. Set up once per medicine; stock is the next screen.

The screenshot shows the 'Medicines' section of the Twinkle Children's Hospital — OPD & Pharmacy application. On the left is a dark sidebar with navigation links: OPD, Patients, Pharmacy counter, Medicines (highlighted), Inventory, Reports, and Settings. The main area is titled 'Medicines' and shows '1 medicine(s) in the catalogue'. At the top of this area is a search bar containing 'Amoxyclav Drops 15ml', a 'Search' button, and a '+ New medicine' button. Below the search bar is a table with columns: MEDICINE, DRUG, PACK, MAKER, RACI, GST, SCH, PER PAI, and STOCK. The table contains one row for 'Amoxyclav Drops 15ml' with values: 12.0, None, 1, and 40. To the right of the table is a 'Medicine details' form. It includes fields for Brand name (Amoxyclav Drops 15ml), Drug / generic name, Composition, Storage, Manufacturer, Pack size, HSN (3004), GST % (12), Schedule (None), Rack, Reorder level (0), Sold as (Bottle), and a checkbox for 'Sell loose units' (checked). The bottom of the form shows 'Units in one pack'.

The catalogue (left)

Search box, **Search** and **+ New medicine**. The grid shows medicine, drug, pack, maker, rack, GST %, schedule, units per pack, and stock on hand. Click a row to load it into the form on the right.

Search matches the **brand name**, the **drug name**, the manufacturer and the rack. Typing `paracetamol` finds Calpol; typing `calpol` finds it too.

Medicine details (right)

Field	Notes
Brand name	What is printed on the pack — <i>Calpol</i> . The only required field
Drug / generic name	The drug itself — <i>Paracetamol 250mg</i> . Searched as well
Manufacturer	Company name
Pack size	As printed, e.g. <code>10 TAB</code> , <code>60ML</code>
HSN	Tax code. <code>3004</code> covers most formulations
GST %	Usually 5 or 12
Schedule	<code>None</code> , <code>H</code> , <code>H1</code> , <code>X</code> . H1 sales are recorded in a register
Rack	Where it sits on the shelf. Searchable
Reorder level	Below this it appears in the Low stock report
Units per pack	10 for a ten-tablet strip. 1 for a syrup bottle
Sell loose units	Ticked, part of a strip can be sold. Unticked, the counter insists on whole packs
Active	Uncheck to hide it from the counter
Save medicine	Saves it

Units per pack is what makes loose sale work

Set it to `10` for a strip of ten tablets and stock is counted in **tablets**, so a customer can buy five. Leave it at `1` for a syrup bottle — half a bottle is not a thing you can sell.

7. Inventory — what is on the shelf

Everything to do with stock: receiving it, seeing the batches, correcting a count. Nothing here changes what a medicine *is* — that is the Medicines screen.

Finding the medicine (left)

Type any part of the brand name, drug name, maker or rack and click **Search**, then click the row. The heading at the top of the screen then names the medicine and how much is on hand, so you always know what you are about to change.

Import supplier bill sits next to Search — see [section 8](#).

Receive stock (top right)

This is the only way stock enters, and it always creates a batch.

Field	Notes
Batch no	Printed on the pack. Required — it goes on the bill by law
Expiry	The pack is good until the end of that month
Packs	How many packs arrived — strips, boxes, bottles
Free	Scheme quantity, the "+1" in 10+1. Adds to stock, costs nothing
Rate	What the hospital paid per pack
MRP	The price printed on the pack. The counter prices from this
Supplier, Supplier bill no	For your records

Field	Notes
Add stock	Adds it

Packs in, units out

Under the quantity boxes a grey line reads back what you have entered: "20 pack(s) × 15 = 300 tablets onto the shelf". You count deliveries in strips, the counter sells tablets, and this is the one place the two meet — so it says so out loud rather than leaving you to trust it.

The form clears whenever you pick a different medicine, so a price or expiry from the last delivery can never be carried onto the wrong batch.

Batches on the shelf lists every batch of the selected medicine with its expiry, MRP and quantity left.

Adding stock always adds. Receiving the same batch number again increases what is on the shelf. It never replaces it.

Correct the stock count

For when the shelf and the screen disagree — breakage, a miscount, or something keyed in wrongly.

Control	Notes
Batch	Which batch is wrong. Shows expiry, MRP and current count
True count	What is actually on the shelf, in units
Reason	Recount , Breakage , Expired , Lost , Entry error , Other
Notes	Free text — worth writing for anything unusual
Correct count	Applies it
Recent corrections	When, what, was, now, change, reason and notes

Every correction is recorded

Stock otherwise only moves by receiving or selling, and both leave a document. A manual correction has none, so it writes its own — otherwise a shortfall looks the same as theft and nobody can say what happened.

The correction and its record are saved together: you cannot get one without the other. Setting the count to what it already is is refused, and stock cannot go below zero.

8. Importing a supplier bill

Instead of keying in a delivery line by line, load the file your supplier sends. **Inventory** → **Import supplier bill**.

Import a supplier bill

Read file

Bill SW02236 dated 04 Jul 2026 · 9 line(s) · 9 new medicine(s) · 1042 unit(s) · net ₹15334.00

STATUS	MEDICINE	PACK	PER PACK	BATCH	EXPIRY	QTY	FREE	UNITS	RATE	MRP	GST
New medicine	CALCIMAX-P SYP	200ML	1	377DB2609	09/2027	9	1	10	146.29	192.00	5.0
New medicine	CALPOL PED DROPS	15ML	1	NA497	01/2028	5	0	5	23.60	30.98	5.0
New medicine	CALPOL PED DROPS	15ML	1	NA504	01/2028	5	0	5	23.60	30.98	5.0
New medicine	CIPLOX EYE DROPS CIPLA	5ML	1	6A40064	01/2028	25	0	25	12.56	16.48	5.0
New medicine	DD NORM 1GR SACHET	1GR	1	4315DN002	11/2027	50	10	60	33.52	44.00	5.0
New medicine	FERRO POPS IRON GUMMIES	30s	30	FP2/25/079	05/2027	20	10	900	473.88	621.97	5.0
New medicine	MEFTAGESIC DS SYRUP	60ML	1	ZQL2632	02/2028	9	1	10	51.81	68.00	5.0

What the file says

	LINE	FIELD	DETAIL
Info	2	BillDate	'04-07-2026' read as 04 Jul 2026. Check this is right before importing.
Info	2	Mrp	CALCIMAX-P SYP: MRP up from 187.00 to 192.00. Stock already on the shelf keeps its own MRP.

Ready to import. Stock will be added to what is already on the shelf.

Close

Import

Step 1 — choose the profile and the file

Control	What it does
Supplier profile	Which supplier's format this is. Each knows that supplier's date and expiry style
File	The path. Use Browse
Supplier name	Type this — the file does not contain it
Browse...	Pick the file. Reads it immediately
Read file	Re-reads it after changing the profile

Step 2 — check what it will do

The summary line reads, for example: "Bill SW02236 dated 04 Jul 2026 · 9 line(s) · 9 new medicine(s) · 1042 unit(s) · net ₹15334.00"

Column	Meaning
STATUS	Matched — found in your catalogue · Check — a likely match, confirm it · New medicine — will be created
MEDICINE, PACK, BATCH, EXPIRY	As the supplier sent them
PER PACK	Editable. Units in one pack
QTY, FREE	Packs billed, and free packs
UNITS	What will land on the shelf: (qty + free) × per pack
RATE, MRP, GST	Cost, printed price, tax rate

What the file says below lists everything worth knowing — the bill date it read, MRP changes, anything it could not understand.

Check the PER PACK column

The file rarely states how many are in a pack. 30s is read as 30 gummies. 60ML is one bottle and stays 1 — a syrup is not sixty sellable units.

For strips, **type the real number** before importing. Correct it once and the medicine remembers it.

Step 3 — import

Import writes everything in one go. **Close** abandons it — nothing is written until you click Import.

Afterwards it reports: *"Imported as GRN00003: 9 line(s), 9 new medicine(s), 1042 unit(s) added to stock."*

What the import guarantees

- **Stock is added**, never replaced. 12 counted by hand plus 5 on the bill is 17
- **The same bill cannot be imported twice.** It is refused by bill number
- **Nothing is written if anything fails.** All of it, or none
- **The supplier's product codes are remembered**, so their next bill matches by itself

Save & print bill

Data is stored on this PC. A backup is taken each day it is opened.

Three steps per line: **find the medicine, set the quantity, add.**

Add medicine to the bill

Control	What it does
Medicine	Type part of the name. Enter searches
Find	Runs the search
Results list	Shows pack, maker, rack and stock. Click one
Batch	The nearest-expiry batch with stock is chosen for you
Qty (units)	Tablets, not strips. 5 sells five out of a strip
Disc %	Discount on this line
Add to bill	Adds the line
Stock came in — add it	Puts stock on the shelf from here. See below

The medicine is in the shop but the screen says none

It happens: a delivery arrived and nobody entered it, or it was bought in as a one-off. **Do not send the patient away and do not leave the bill.**

Click **Stock came in — add it**.

Add stock

Calpol Syrup 60ml

60 bottles on hand

Packs on the shelf

5

MRP per pack

112.0

Rate paid

80.64

One pack is one bottle.

5 bottles onto the shelf

Batch no (if you have it)

Expiry

27-07-2028

This goes on the shelf now so the patient can be served. It has no supplier bill behind it, so it is listed under Reports → Stock to reconcile until the bill arrives. Leave the batch number blank and one is allocated for you.

Cancel

Add to shelf

Field	Notes
Packs on the shelf	How many strips, boxes or bottles you are putting in
MRP per pack	Required — nothing can be priced without it. Filled in from the last time this medicine came in
Rate paid	Leave it if you do not know. It can be filled in when the bill arrives
Batch no	Enter it if it is on the pack. Leave it blank and one is allocated for you , starting CTR-
Expiry	Defaults to two years out. Change it if you know better
Add to shelf	Puts it in. You come straight back to the bill

The grey line reads back what you have entered — *"5 pack(s) × 10 = 50 tablets onto the shelf"* — before anything is committed.

What this costs you, and why it is worth it

Stock added this way has **no supplier bill behind it**, so total purchases will not tie out against total sales until that bill turns up. That is a deliberate trade: a counter that stops to do paperwork with a patient waiting is a counter nobody uses.

Nothing is hidden to buy that. Every entry is a proper goods-inward document with the quantity, the MRP, the date and who keyed it, and every one of them is listed under **Reports** → **Stock to reconcile** until it is matched to the real bill. You can square the books whenever you like — a week later, a month later — because nothing was done quietly.

Bill items

Column	Notes
MEDICINE, BATCH, EXPIRY	What is being handed over
QTY	Base units. Editable
PACKS	Reads back as 2 × 10 TAB + 3
MRP, DISC %	Editable
GST %, AMOUNT	Calculated
×	Removes the line

Customer (right)

Control	Notes
Name	Defaults to Cash . A walk-in needs no patient record
Prescribed by	Doctor's name. Required on the bill for a Schedule H1 drug
Or pull today's OPD prescription	Pick a patient seen today
Load prescription	Puts every prescribed medicine that is in stock on the bill

Totals

Gross	what the MRP comes to
Discount	anything taken off
Taxable value	the MRP with GST taken back out of it
CGST + SGST	the tax, split in half
Round off	to the nearest rupee
NET PAYABLE	what the customer hands over

Control	What it does
Payment	Cash, UPI or Card
Save & print bill	Saves and opens the preview
Save without printing	Saves only
Clear bill	Empties the counter without saving

Every bill is settled in full

There is no credit and no part payment — by design, because the clinic does not offer them. A bill is paid before it is saved, so nothing is ever outstanding and there is no balance to chase.

MRP already includes GST

Tax is never added on top. Ten strips at ₹112 MRP come to **exactly ₹1,120** — of which ₹1,000 is the taxable value and ₹120 is GST.

A whole strip always costs what is printed on it

Five tablets from a ₹112 strip of ten cost ₹56. But a **full** strip costs ₹112, not ten times the rounded per-tablet price. This matters where the price does not divide evenly: ₹87.50 across fifteen tablets is ₹5.83 each, and the full strip still costs ₹87.50.

10. Patients

Search by **name, patient number or phone**. A phone number lists the whole family.

The register (top left)

Patient no, name, phone, age, sex, allergies. Click a row to select it.

Patient details (right)

Field	Notes
Patient no	Allocated on save, e.g. P00012
Name, Phone, Age, Sex	
Address, Allergies	Optional
Save patient	Saves changes
Remove	Refused if they have visits on record
+ New patient	Registers someone without booking a visit

History (bottom left)

Visits & prescriptions — every visit ever, with diagnosis, fee and receipt number. Select one, then:

- **Print prescription** — prints it however long ago it was
- **Print fee receipt** — prints the receipt again, marked DUPLICATE

Medicine bills — every bill for this patient, with **Print bill**.

This is where you go when someone returns weeks later having lost a receipt.

Reprint selected bill

Data is stored on this PC. A backup is taken each day it is opened.

Across the top for the chosen date: pharmacy sales, cash, UPI, consultation fees collected, and OPD visits.

Tab	What it is for
Day book	Every bill for the day. Find any bill searches every date by bill number or customer name. Reprint selected bill prints it again
GST summary	Taxable value, CGST and SGST grouped by rate — what a return needs
OPD register	Every visit, diagnosis, fee, and whether it was paid
Expiring soon	Batches within 90 days of expiry. Return these to the distributor
Low stock	Anything at or below its reorder level
Stock to reconcile	Everything put on the shelf at the counter with no supplier bill behind it. See below

Tab	What it is for
Schedule H1 register	Statutory record of H1 sales. Keep for three years

Stock to reconcile

When the counter adds stock to serve a patient, there is no supplier bill behind it yet. Until there is, purchases will not tie out against sales — so every one of those entries is listed here with the date, medicine, batch, quantity on hand, MRP and the rate paid.

Work through it whenever it suits you. For each row, find the supplier bill it belongs to and check the quantity and the rate against it. A batch number starting **CTR-** was allocated by the system rather than read off the pack, so those are the ones worth checking against the real batch number.

The list is not a warning and does not have to be empty. It is a worklist.

12. Printing

Everything previews before any paper moves.

Print preview — Receipt RCP00001 (duplicate)

Twinkle Children's Hospital
GSTIN: 36ABCDE1234F1Z5
CONSULTATION RECEIPT

Receipt No: RCP00001	Date: 27 Jul 2026 07:19
Patient: Baby Anika (4M)	Patient No: P00001

Paid by Cash

Rupees Three Hundred only

Consultation services. Fees once paid are not refundable.

DUPLICATE

1 of 1

Receipt RCP00001 (duplicate)
Close
Print

Print sends it. **Close** goes back. If no printer is set up the application says so plainly instead of failing, and you can still preview.

Document	Number	Print it from
Tax invoice (medicines)	INV00001	Counter · Reports day book · patient record
Consultation receipt	RCP00001	OPD tile · patient record

Document	Number	Print it from
Prescription	V00001	Consultation · OPD tile · patient record

Anything can be reprinted at any time. A reprint is stamped **DUPLICATE** so it cannot be mistaken for the original.

13. What the system will and will not do

Worth reading once. It is the difference between trusting a number and checking it.

Situations it handles for you

Situation	What happens
A child needs 9 tablets from a strip of 10	Priced per tablet, nine come off the shelf, and the bill shows 0 × 10 TAB + 9
A course needs 20 but the oldest batch holds 15	Split across two batches, two lines, both batch numbers on the bill. Nearest expiry goes first
A course needs 20 and there are only 12	It bills 12 and says "Short: Amoxicillin (12 of 20)". It never quietly bills less without telling you
A strip of 15 and a strip of 10 of the same drug	Each batch prices against the pack it actually came in. Old stock is never repriced
A medicine is prescribed that you do not stock	Written on the prescription, named at the counter, never added to your records
A medicine has run out mid-queue	Add it from the counter — see section 9
Stock is expired	Never dispensed. It stays on the shelf listing so you can see it and return it
A sealed pack that cannot be split	Untick Sell loose units and the counter insists on whole packs, telling you the number to type
A Schedule H1 medicine	Cannot be saved without the prescribing doctor. It goes in the register automatically
Two people on one phone number	Both appear when you search. You pick which child is here
The same supplier bill loaded twice	Refused. The invoice number is what stops it
The same batch delivered again	Added to what is there. Never replaced
The count on the shelf is wrong	Correct it with a reason. Every correction is recorded with was, now and why

Situation	What happens
A printer is not attached	Everything previews on screen first. Nothing is lost by not printing
The power goes off mid-bill	Nothing is half-saved. A bill either exists completely or not at all
Something unexpected fails	It says so in plain words and keeps running. Your saved data is safe

Situations it does not handle — check these yourself

Situation	What you need to know
A customer returns medicine	There are no returns in this version. Do it on paper and correct the stock count with reason <i>Other</i> and a note
Part payment, or paying later	Not supported, on purpose. A bill is paid in full when it is saved
Purchases balanced against sales	Will not tie out while anything sits in Reports → Stock to reconcile . That list is the gap, and it is deliberate
The rate paid on counter-added stock	Defaults to zero, so anything added that way looks like pure margin until you fill the real rate in
No discounts	The counter charges MRP. There is no discount box, by choice
A batch that expires next week	Sold first, correctly, but you are not warned at the till. Watch Expiring soon
Two people billing at once	One PC, one till. This is not built for two counters on the same data
Changing units per pack after stock exists	Offered as a re-count, and you should accept it. Declining leaves the shelf being sold by the pack
A medicine deleted or made inactive with stock on it	It disappears from the counter but the stock is still counted in reports
Anyone can do anything	There are no logins or permissions. Everyone using the PC has the same rights

The one number to sanity-check daily

Reports → the totals along the top. The day's takings in the drawer should match pharmacy sales plus fees collected. A bill line can no longer be re-priced, so a difference means cash was taken out or a bill was not saved — both worth finding on the day rather than at month end.

14. When something goes wrong

The application does not close on an error

If something unexpected happens it tells you in plain words, writes the details to the log, and **keeps running**. A half-typed bill is not lost. You will see a message like:

Taking the fee could not be completed. The change could not be saved — it may already exist, or a required field is missing. Nothing was changed.

Things it refuses on purpose

It says	Why
"Only 3 × 10 TAB + 4 left of ..."	You cannot sell stock you do not have
"Batch ... expired on ..."	Expired medicine cannot be dispensed
"3 people match that. Select which one"	Siblings share a phone; the wrong child is worse than a second click
"This patient has visits on record"	Deleting them would orphan their bills
"Bill ... was already received on ..."	Importing twice would double your stock
"No MRP" during import	The counter prices from MRP and cannot sell without one
"Batch number is required"	It has to appear on the bill by law

Your data

Everything is in one file: `C:\ProgramData\TwinkleHMS\twinkle.db` . Copy that file and you have copied the clinic.

Backups are automatic — one per day into `C:\ProgramData\TwinkleHMS\backups` , keeping the last 14. That protects against mistakes, **not against the PC dying**. Copy the folder to a pen drive weekly.

The log is at `C:\HMS\Logs` , one file per day, 30 days kept. Settings has an **Open log folder** button and shows the exact path. Send that day's file when reporting a problem.

Changing where things are kept

`appsettings.json` sits next to the application and can be edited in Notepad. Restart the application afterwards.

```
{
  "LogDirectory": "C:\\HMS\\Logs",
  "DatabasePath": null,
  "BackupsToKeep": 14,
  "LogDaysToKeep": 30
}
```

Setting	Notes
LogDirectory	Where daily logs are written
DatabasePath	Full path to the database file. <code>null</code> uses <code>C:\ProgramData\TwinkleHMS\twinkle.db</code>
BackupsToKeep	Daily database backups kept before the oldest is deleted
LogDaysToKeep	Days of logs kept

Use double backslashes in paths, as above.

If the folder cannot be written to — a locked-down PC, or a network drive that is offline — the application does **not** fail. It falls back to `C:\ProgramData\TwinkleHMS\logs`, and the first line of the log says which folder it wanted and which it used. The same applies to a settings file with a typo in it: built-in defaults are used and the log says so.

Not in this version

Sales returns and credit notes · purchase returns · inter-state IGST · e-invoicing · multi-terminal use · the Schedule X narcotic register.

Credit and part payment are not missing — they are deliberately absent. The clinic settles every bill in full at the counter, so there is no outstanding balance anywhere in the system and nothing to reconcile.

The GST arithmetic and the invoice layout are correct for a retail counter, but this is not a certified e-invoicing integration. Have a CA review the GST summary before it feeds a return, and confirm register formats with your local drug inspector.
