

# Twinkle Children's Hospital

---

## User guide

---

For the front desk, the doctor, and the pharmacy counter.

Every screenshot is taken from the running application. To refresh them all after a change, run the one test that produces them:

```
dotnet test tests/Pharma.UiTests --filter ScreenshotCapture
```

---

## Contents

### Getting started

1. The window
2. Settings — set this up first

**The OPD desk** 3. The OPD screen 4. Booking a visit 5. The consultation

**The pharmacy** 6. Medicines — the catalogue 7. Inventory — what is on the shelf 8. Importing a supplier bill 9. The pharmacy counter

**Everything else** 10. Patients 11. Reports 12. Printing 13. Worked examples 14. What the system will and will not do 15. When something goes wrong

**Common tasks, step by step** — the short version of everything above. Start here if you just want to get through a day.

---

## Common tasks, step by step

Each task below is complete on its own. Screen-by-screen detail follows in sections 1 to 15.

### A. Set the clinic up — once, before anything else

---

1. Click **Settings**.
2. Fill in **clinic name**, **address**, **phone**.
3. Tick **Registered for GST** only if the clinic actually is. Then enter the **GSTIN**. Leave it unticked and bills print as a plain invoice.
4. Enter the **drug licence number** and the **pharmacist's name**.

5. Click **Save shop details**.
6. On the right, enter the first **doctor** — name, speciality, registration number, usual fee — and click **Save doctor**.

You cannot book a visit until at least one doctor exists.

## B. Book a walk-in patient

---

1. Click **OPD**, then **+ New visit**.
2. Type the patient's **name or phone number** and press Enter.
3. If they are listed, **click the right person**. If a whole family shares the phone, everyone on it appears — pick the child who is actually here.
4. If nobody matches, the new-patient form opens. Enter **name, phone, age, sex**.
5. Choose the **doctor**, adjust **time** and **fee** if needed.
6. Type the **complaint** if you want it on the tile and the prescription.
7. Click **Book visit**. A token number is allocated.

## C. Take the consultation fee

---

1. On the **OPD** screen, find the patient's tile in **Waiting**.
2. Set **Fee taken as** to Cash, UPI or Card.
3. Click **Fee** on the tile.
4. The receipt preview opens — click **Print**, or **Close** to skip printing.

The badge changes to **Fee paid**. Clicking Fee twice does nothing.

## D. See a patient and write a prescription

---

1. Click **Consult** on the patient's tile.
2. Fill in **vitals, complaint, diagnosis, advice** — all optional.
3. For each medicine:
  - Type two letters or more into **Medicine**.
  - **Click a match** to use one you stock, or keep typing for one you do not.
  - Enter the **dose**.
  - Set **Morning · Afternoon · Night** from the three lists — **0**, **1/4**, **1/2**, **1** or **2**. One in the morning and one at night is **1**, **0**, **1**.
  - Enter **days**.
  - **Qty is filled in for you** in individual tablets — change it if you want.
  - Click **Add**.
4. Set a **review date** if there is one.
5. Click **Save & complete**. The tile moves to **Completed**.

The consultation covers the whole window while it is open, and the rest of the app waits behind it. Nothing else can be started until you leave, so a consultation cannot be opened and then forgotten. **Close** or the **Esc** key leaves it; if anything has been typed and not saved you are asked first.

## E. Add a new medicine and put stock on the shelf

---

This is two jobs on two screens. **Medicines** is where a medicine is described, once. **Inventory** is where stock arrives, every delivery.

### First, describe the medicine — Medicines screen

1. Click **Medicines**, then **+ New medicine**.
2. Enter the **brand name** as printed on the pack — *Calpol*.
3. Enter the **drug / generic name** — *Paracetamol 250mg*. Staff search by either, so filling both is worth the few seconds.
4. Enter the **manufacturer** and **pack size** as printed.
5. Set **Sold as** — tablet, capsule, bottle, sachet.
6. Set **Units in one pack** — **15** for a strip of fifteen, **1** for a bottle.
7. Set **GST %**, **schedule**, **rack** and **reorder level**.
8. Click **Save medicine**.

### Then, put stock on the shelf — Inventory screen

9. Click **Inventory**, type the name in the search box and click **Search**.
10. Click the medicine in the list. The heading names it and says how much is on hand.
11. In **Receive stock**, enter **batch no**, **expiry**, **packs received**, any **free** packs, the **rate** you paid and the **MRP** printed on the pack.
12. Check the line that appears — *"20 pack(s) × 15 = 300 tablets onto the shelf"*.
13. Click **Add stock**.

## F. Load a supplier's file instead of typing it

---

1. Click **Inventory**, then **Import supplier bill**.
2. Choose the **supplier profile** that matches their format.
3. Click **Browse...** and pick the file. It is read immediately.
4. Type the **supplier name** — the file does not contain it.
5. Check the grid, especially **PER PACK**. **30s** reads as 30; **60ML** stays 1. **Type the real number for any strip**.
6. Read the notices underneath — bill date, MRP changes, anything unclear.
7. Click **Import**.

Stock is **added** to what is already there. The same bill cannot be imported twice.

## G. Sell to someone who walks in

---

1. Click **Pharmacy counter**.
2. Type part of the medicine name. It filters as you type, in any case.
3. **Click the medicine** in the results.
4. Enter **How many**, and check the unit beside it says what you mean — *tablets* or *strips of 10*.
5. Click **Add to bill**. Repeat for each medicine.
6. Leave the customer as **Cash**, or type their name.
7. Choose **Payment**, then **Save & print bill**.

## H. Sell part of a strip

---

Exactly as task G. Nine tablets out of a strip of ten is **9** with the unit on **tablets** — the bill line then reads **0 x 10 TAB + 9 tablets** so you can see what to hand over.

The price is proportional: a strip of ten at ₹120 makes each tablet ₹12, so nine is ₹108. **A full strip always costs exactly the MRP printed on it** — the arithmetic never drifts by a few paise.

Switch the unit to **strips of 10** and type **2** when someone wants whole strips; it becomes 20 tablets.

### If the unit only offers "units"

That medicine has **Units in one pack** set to 1, so the software believes one strip is one tablet — and nine tablets will be charged as nine strips. **Settings → Check data health** finds every medicine in that state and fixes them together. See task N.

## I. Dispense what a doctor prescribed

---

1. Click **Pharmacy counter**.
2. Under **Or pull today's OPD prescription**, choose the patient.
3. Click **Load prescription**. Everything prescribed **and in stock** is added with the right quantity.
4. Anything missing is named on screen — tell the parent to buy it outside.
5. Choose **Payment**, then **Save & print bill**.

## J. Correct a stock count

---

1. Click **Inventory** and select the medicine.
2. In **Correct the stock count**, choose the **batch**.
3. Enter the **true count** — what is actually on the shelf, in units.
4. Choose a **reason**: recount, breakage, expired, lost, entry error.
5. Add a **note** if it is unusual.
6. Click **Correct count**.

Every correction is recorded underneath with was, now and why.

## K. Print something again, however long ago

---

1. Click **Patients** and search by name or phone.
2. Select the patient.
3. **Visits & prescriptions** tab → select the visit → **Print prescription** or **Print fee receipt**.
4. **Medicine bills** tab → select the bill → **Print bill**.

For a walk-in with no patient record: **Reports** → **Day book** → **Find any bill**, search the bill number or customer name across all dates, then **Reprint**.

## L. Close the day

---

1. Click **Reports**.
2. Check the totals along the top — pharmacy sales, cash, UPI, fees collected.
3. **Day book** — every bill of the day.
4. **GST summary** — only if registered.
5. **Expiring soon** — return these to the distributor.
6. **Low stock** — what to order.
7. **Stock to reconcile** — anything added at the counter without a supplier bill. Match each to the bill when it arrives.
8. **Schedule H1 register** — keep for three years.

## M. Sell something the system says you do not have

---

1. At the **Pharmacy counter**, find the medicine and click it.
2. Click **Stock came in — add it**.
3. Enter **packs on the shelf** and the **MRP**. Everything else is optional.
4. Click **Add to shelf** and carry on with the bill.

It appears under **Reports** → **Stock to reconcile** until you match it to the supplier bill.

## N. Put the medicine records right

---

Do this **once**, before you rely on the counter. It is the difference between nine tablets costing ₹108 and costing ₹1,080.

1. Click **Settings**, then **Check data health**.
2. Read the list. Each row says what is wrong, what it will become, and what happens to the stock figure.
3. Leave the ticks as they are and click **Put the ticked ones right**.

| What it finds                             | What it means                                                                                                                                                                                 |
|-------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pack size disagrees</b>                | The pack says 15 but the medicine says 1 per pack, so the counter sells whole strips to anyone asking for tablets. Fixing it re-counts 59 strips as 885 tablets — the same packs on the shelf |
| <b>Old stock at a different pack size</b> | Stock received before the medicine was corrected. Re-counted to match                                                                                                                         |
| <b>Sold-as not set</b>                    | Quantities read "units" instead of tablets. Taken from what is printed on the pack                                                                                                            |
| <b>Duplicate — fix by hand</b>            | The same medicine twice. Press <b>Merge...</b> on the row                                                                                                                                     |

Every re-count writes a line in **Inventory** → **Recent corrections**, so nothing changes quietly.

### Before you tick a re-count, check one thing

"59 → 885" is right **only if the 59 means 59 strips**. If it means 59 loose tablets, untick that row — it would multiply your stock by fifteen.

## O. Merge a medicine that appears twice

1. **Settings** → **Check data health**.
2. Find the row marked **Duplicate** and click **Merge...**
3. Confirm.

Its batches, purchases, sales and prescriptions all move to the record holding the most stock, and the empty one is retired. Nothing is deleted.

You will not be able to create a new duplicate — the same brand, maker and pack is refused, and you are offered the existing one instead.

## 1. The window

Seven screens down the left. The one you are on is highlighted.

| Button                  | What it is for                                              |
|-------------------------|-------------------------------------------------------------|
| <b>OPD</b>              | The day's queue. Book visits, take fees, open consultations |
| <b>Patients</b>         | Everyone ever registered, with their whole history          |
| <b>Pharmacy counter</b> | Selling medicines                                           |
| <b>Medicines</b>        | The catalogue — what each medicine is. Set up once          |

| Button           | What it is for                                                |
|------------------|---------------------------------------------------------------|
| <b>Inventory</b> | Stock — what is on the shelf. Receiving, batches, corrections |
| <b>Reports</b>   | End of day, GST, expiry, low stock                            |
| <b>Settings</b>  | Clinic details, doctors, screen layout                        |

**Medicines and Inventory are deliberately separate.** Describing a medicine is a one-off job usually done by whoever sets the shop up; receiving stock happens every delivery and is done at the counter. Keeping them apart means neither screen is crowded with the other's fields.

Some screens — the consultation, importing a bill, a print preview — cover the window while they are open, and the rest of the app waits behind them. This is on purpose: nothing can be half-started and then forgotten.

The heading of every screen shows the screen name and a one-line summary underneath — for example "2 waiting · 1 completed · Sun, 26 Jul".

At the bottom left it reminds you where the data lives and that a backup is taken each day the application is opened.

## 2. Settings — set this up first

Everything here prints on your bills, receipts and prescriptions.

**Twinkle Children's Hospital — OPD & Pharmacy**

**Settings**  
Shop details printed on bills and prescriptions

**Shop details**  
These appear on every printed bill and prescription. GSTIN and the drug licence number are required on a retail chemist's tax invoice.

## Shop details (left card)

| Control            | What to enter                                                |
|--------------------|--------------------------------------------------------------|
| Clinic / shop name | Printed largest, at the top of every document                |
| Address            | One line, under the name                                     |
| Phone              | Shown beside the address                                     |
| Registered for GST | Off by default. See below — this changes what your bills are |
| GSTIN              | Your GST number. Only enabled when registered                |
| Drug licence no    | Your 20B/21B number. <b>Required on a chemist's bill</b>     |
| Pharmacist         | Printed at the foot of the bill                              |
| OPD queue layout   | Tiles or Rows — see <a href="#">section 3</a>                |
| Bill footer        | Free text at the bottom of a bill, e.g. "Get well soon"      |
| Save shop details  | Applies everything above. New documents use it immediately   |

Below the button it shows the **database file** and the **activity log** path, with an **Open log folder** button. You need those only if reporting a problem.

The application works with these blank — the GSTIN line simply does not print. Fill them in before you issue a real bill to a customer.

### Registered for GST, or not

This one setting changes what your bills legally are.

|                        | Registered <b>off</b> | Registered <b>on</b>   |
|------------------------|-----------------------|------------------------|
| Bill is headed         | INVOICE               | TAX INVOICE            |
| GSTIN printed          | no                    | yes                    |
| GST charged            | <b>none</b>           | extracted from the MRP |
| GST column and summary | hidden                | shown                  |

It is **off by default on purpose**. Issuing a document headed "tax invoice", with a GSTIN on it, when you are not registered is a false statement — so switching it on has to be a deliberate act.

Turning it on later does not rewrite old bills. Each bill remembers what it was when it was issued, so a reprint always shows what the customer was given.

## Doctors (right card)

| Control                         | What it does                                        |
|---------------------------------|-----------------------------------------------------|
| <b>List</b>                     | Every doctor. Click one to edit it                  |
| <b>Name</b>                     | Appears as an OPD tab and on the prescription       |
| <b>Speciality</b>               | Printed under the doctor's name on the prescription |
| <b>Registration no</b>          | Printed on the prescription. Required on a real one |
| <b>Default consultation fee</b> | Fills in automatically when booking for this doctor |
| <b>Save doctor</b>              | Saves the one being edited                          |
| <b>+ New doctor</b>             | Clears the form to add another                      |

At least one doctor is needed before any visit can be booked.

## 3. The OPD screen

## Top row

| Control                | What it does                                    |
|------------------------|-------------------------------------------------|
| <b>All doctors</b> tab | Shows every patient in the clinic               |
| <b>Doctor tabs</b>     | One per doctor. Shows only their patients       |
| <b>+ New visit</b>     | Opens the booking panel on the right            |
| <b>Date</b>            | Which day you are looking at. Defaults to today |

The doctor is a tab rather than a column on each patient, which is why the tiles stay small.

## The two columns

**Waiting** — everyone still to be seen. **Completed** — everyone finished.

A patient moves from one to the other and can be moved back.

## What a waiting tile shows

| On the tile                | Meaning                                              |
|----------------------------|------------------------------------------------------|
| Green number               | <b>Token number.</b> What you call out               |
| Name                       | The patient                                          |
| 4F • 08:55                 | Age, sex, and the time they were booked              |
| Grey line                  | What they came in with                               |
| Fee paid / Fee due         | Green if the consultation fee is taken, amber if not |
| just arrived / waiting 12m | How long they have been sitting there                |

## Buttons on a waiting tile

| Button         | What it does                                                              |
|----------------|---------------------------------------------------------------------------|
| <b>Consult</b> | Opens the consultation window for this patient                            |
| <b>Fee</b>     | Takes the consultation fee, issues a numbered receipt, offers to print it |
| <b>Done</b>    | Moves the tile to Completed without a consultation                        |
| <b>Cancel</b>  | Cancels the visit. Asks first                                             |

## Buttons on a completed tile

| Button         | What it does                                        |
|----------------|-----------------------------------------------------|
| <b>Rx</b>      | Prints the prescription. Says so if there isn't one |
| <b>Receipt</b> | Prints the fee receipt again, marked DUPLICATE      |
| <b>Reopen</b>  | Moves the patient back to Waiting                   |

## Choosing tiles or rows

Set in Settings. Tiles are easier to read across a room; rows fit more people on screen when the clinic is busy. **Everything works the same in either.**

## 4. Booking a visit

Click **+ New visit**. The panel opens on the right, in three numbered steps.

1 Name or phone. A whole family shares one number, so search by it.

2 Searches. If nobody matches, the new-patient form opens instead.

3 Everyone on that number. Pick the child who is actually here — this is where siblings get mixed up.

4 Books the visit and allocates the next token for the day.

5 Empties the form. Nothing is booked until Book visit is pressed.

## Step 1 — find the patient

| Control    | What it does                                    |
|------------|-------------------------------------------------|
| Search box | Type a name or a phone number. Enter also works |
| Find       | Runs the search                                 |

| Control       | What it does                                  |
|---------------|-----------------------------------------------|
| Results list  | Everyone matching. <b>Click the right one</b> |
| + New patient | Opens the form below to register someone new  |

If nobody matches, the new-patient form opens by itself with what you typed already filled in.

| New patient field | Notes                                                 |
|-------------------|-------------------------------------------------------|
| Name              | The only one that is required                         |
| Phone             | The parent's number. Shared across siblings is normal |
| Age               | In years                                              |
| Sex               | Male, Female or Other                                 |
| Back to search    | Returns to the list without adding anyone             |

## Step 2 — doctor and time

| Control | Notes                                  |
|---------|----------------------------------------|
| Doctor  | Defaults to whichever tab you were on  |
| Time    | 24-hour, e.g. 09:45 . Defaults to now  |
| Fee     | Defaults to that doctor's usual charge |

## Step 3 — complaint

Optional. Whatever you type shows on the queue tile and on the prescription.

Then **Book visit**. A token number is allocated automatically and the panel closes. **Fee taken as** below the button sets the payment method used when you later click **Fee** on the tile.

### One phone, several children

A parent's number covers the whole family. Typing it lists **every child** registered against it, and the message says so: *"3 people are registered on this number. Select which one is here."*

The number is matched on its digits, so 9008007001 , +91 90080 07001 and 90080 07001 all find the same family.

If you click **Book visit** without choosing one, the application **stops you** rather than quietly registering a fourth child who already exists.

# 5. The consultation

Click **Consult** on a tile.

## Right — the prescription

Fill the form at the top and press **Add**. Each medicine then appears in the list below.

| Control                     | Notes                                                                                            |
|-----------------------------|--------------------------------------------------------------------------------------------------|
| Medicine                    | Type two letters or more to search our pharmacy. Matches appear underneath — click one to use it |
| Dose                        | e.g. 5 ml , 1 tab                                                                                |
| Morning · Afternoon · Night | Three lists: 0 , 1/4 , 1/2 , 1 , 2 . Pick how many at each time of day                           |
| Days                        | Length of the course                                                                             |
|                             | <i>Nothing is filled in for you — a dose is the doctor's decision, not the software's</i>        |
| Qty (units)                 | <b>Individual tablets.</b> Worked out for you — change it if you want                            |
| Grey line under the fields  | What the course comes to, in tablets and in strips                                               |
| Instructions                | e.g. "after food". Printed under the line                                                        |
| Add                         | Adds the medicine to the list                                                                    |
| ✕ in the list               | Removes that medicine                                                                            |

The three lists replace the old typed frequency box. **1-0-1** was quick for anyone who already knew the notation and a guess for everyone else; picking from three lists cannot be mistyped, and the prescription still prints in the familiar **1-0-1** form.

Frequency and days are **kept after adding**, because a prescription usually repeats the same course — only the medicine changes.

## Quantity is always in individual units

You pick **1**, **0**, **1** for **3** days and it fills in **6** — six tablets, not six strips. The line underneath shows what the pharmacy will hand over, e.g. "6 units · 1 × 10 TAB minus 4", so there is never any doubt about whether a number means tablets or strips.

**SOS** and **PRN** have no fixed daily dose, so nothing is filled in and you type the quantity yourself.

## Prescribing something the clinic does not stock

Type the name and simply **do not pick anything from the list**. The line reads "Not in our pharmacy — it will be written on the prescription only", and it is added exactly as typed. The parent buys it from an outside chemist.

**It is never added to our medicine records.** A name typed on a prescription does not create a medicine, a batch, or a price — our catalogue only ever grows when stock is received.

A medicine you **do** pick from the list shows "In our pharmacy · 60 in stock" and can be pulled straight onto a bill at the counter, with the quantity already correct. One prescription can mix the two freely.

## Bottom buttons

| Button                     | What it does                                               |
|----------------------------|------------------------------------------------------------|
| <b>Close</b>               | Leaves the consultation. Asks first if anything is unsaved |
| <b>Save</b>                | Keeps everything. Patient stays in Waiting                 |
| <b>Print prescription</b>  | Saves, then opens the print preview                        |
| <b>Save &amp; complete</b> | Saves and <b>moves the tile to Completed</b>               |

The **Esc** key does the same as **Close**. While the consultation is open the rest of the app is greyed out and waits — you cannot wander off to another screen with a half-written prescription behind you.

## 6. Medicines — the catalogue

What each medicine **is**. Set up once per medicine; stock is the next screen.

| <b>Schedule</b>            | <code>None</code> , <code>H</code> , <code>H1</code> , <code>X</code> . H1 sales are recorded in a register |
| <b>Rack</b>                | Where it sits on the shelf. Searchable                                                                      |

| Field            | Notes                                                                             |
|------------------|-----------------------------------------------------------------------------------|
| Reorder level    | Below this it appears in the Low stock report                                     |
| Units per pack   | <b>10 for a ten-tablet strip. 1 for a syrup bottle</b>                            |
| Sell loose units | Ticked, part of a strip can be sold. Unticked, the counter insists on whole packs |
| Active           | Uncheck to hide it from the counter                                               |
| Save medicine    | Saves it                                                                          |

## Units per pack is what makes loose sale work

Set it to **10** for a strip of ten tablets and stock is counted in **tablets**, so a customer can buy five. Leave it at **1** for a syrup bottle — half a bottle is not a thing you can sell.

# 7. Inventory — what is on the shelf

Everything to do with stock: receiving it, seeing the batches, correcting a count. Nothing here changes what a medicine *is* — that is the Medicines screen.

**Twinkle Children's Hospital — OPD & Pharmacy**

**Inventory**

Batch:

True count:  Reason: Recount

Notes:

- Find the medicine you are receiving. Brand, drug, maker or rack.
- Printed on the pack. Required — it has to appear on the bill by law.
- The pack is good until the END of that month.
- Click it. The heading then names it and says how much is on hand.
- How many PACKS arrived — strips, boxes or bottles. Not tablets.
- Scheme quantity: the +1 in 10+1. Goes on the shelf, costs nothing.
- The price printed on the pack. The counter prices everything from this.
- Reads back what you typed, in tablets. Check this before adding.
- Adds to the shelf. It never replaces what is already there.

## Finding the medicine (left)

Type any part of the brand name, drug name, maker or rack and click **Search**, then click the row. The heading at the top of the screen then names the medicine and how much is on hand, so you always know what you are about to change.

**Import supplier bill** sits next to Search — see [section 8](#).

## Receive stock (top right)

**This is the only way stock enters, and it always creates a batch.**

| Field                             | Notes                                                              |
|-----------------------------------|--------------------------------------------------------------------|
| <b>Batch no</b>                   | Printed on the pack. <b>Required — it goes on the bill by law</b>  |
| <b>Expiry</b>                     | The pack is good until the <b>end</b> of that month                |
| <b>Packs</b>                      | How many <b>packs</b> arrived — strips, boxes, bottles             |
| <b>Free</b>                       | Scheme quantity, the "+1" in 10+1. Adds to stock, costs nothing    |
| <b>Rate</b>                       | What the hospital paid per pack                                    |
| <b>MRP</b>                        | The price printed on the pack. <b>The counter prices from this</b> |
| <b>Supplier, Supplier bill no</b> | For your records                                                   |
| <b>Add stock</b>                  | Adds it                                                            |

## Packs in, units out

Under the quantity boxes a grey line reads back what you have entered: "20 pack(s) × 15 = 300 tablets onto the shelf". You count deliveries in strips, the counter sells tablets, and this is the one place the two meet — so it says so out loud rather than leaving you to trust it.

The form clears whenever you pick a different medicine, so a price or expiry from the last delivery can never be carried onto the wrong batch.

**Batches on the shelf** lists every batch of the selected medicine with its expiry, MRP and quantity left.

**Adding stock always adds.** Receiving the same batch number again increases what is on the shelf. It never replaces it.

## Correct the stock count

For when the shelf and the screen disagree — breakage, a miscount, or something keyed in wrongly.

| Control                   | Notes                                                     |
|---------------------------|-----------------------------------------------------------|
| <b>Batch</b>              | Which batch is wrong. Shows expiry, MRP and current count |
| <b>True count</b>         | What is <b>actually</b> on the shelf, in units            |
| <b>Reason</b>             | Recount , Breakage , Expired , Lost , Entry error , Other |
| <b>Notes</b>              | Free text — worth writing for anything unusual            |
| <b>Correct count</b>      | Applies it                                                |
| <b>Recent corrections</b> | When, what, was, now, change, reason and notes            |

## Every correction is recorded

Stock otherwise only moves by receiving or selling, and both leave a document. A manual correction has none, so it writes its own — otherwise a shortfall looks the same as theft and nobody can say what happened.

The correction and its record are saved together: you cannot get one without the other. Setting the count to what it already is is refused, and stock cannot go below zero.

## 8. Importing a supplier bill

Instead of keying in a delivery line by line, load the file your supplier sends. **Inventory** → **Import supplier bill**.

| Column                               | Meaning                                              |
|--------------------------------------|------------------------------------------------------|
| <b>MEDICINE, PACK, BATCH, EXPIRY</b> | As the supplier sent them                            |
| <b>PER PACK</b>                      | <b>Editable.</b> Units in one pack                   |
| <b>QTY, FREE</b>                     | Packs billed, and free packs                         |
| <b>UNITS</b>                         | What will land on the shelf: (qty + free) × per pack |
| <b>RATE, MRP, GST</b>                | Cost, printed price, tax rate                        |

**What the file says** below lists everything worth knowing — the bill date it read, MRP changes, anything it could not understand.

### Check the PER PACK column

The file rarely states how many are in a pack. `30s` is read as 30 gummies. `60ML` is one bottle and stays `1` — a syrup is not sixty sellable units.

For strips, **type the real number** before importing. Correct it once and the medicine remembers it.

## Step 3 — import

**Import** writes everything in one go. **Close** abandons it — nothing is written until you click Import.

Afterwards it reports: *"Imported as GRN00003: 9 line(s), 9 new medicine(s), 1042 unit(s) added to stock."*

### What the import guarantees

- **Stock is added**, never replaced. 12 counted by hand plus 5 on the bill is 17
- **The same bill cannot be imported twice.** It is refused by bill number
- **Nothing is written if anything fails.** All of it, or none
- **The supplier's product codes are remembered**, so their next bill matches by itself

## 9. The pharmacy counter

Three steps per line: **find the medicine, set the quantity, add.**

Every control, ringed and explained:

|   | Control                       | What it is for                                                                            |
|---|-------------------------------|-------------------------------------------------------------------------------------------|
| 1 | <b>Search</b>                 | Any part of the brand, drug, maker or rack. Filters as you type, in any case              |
| 2 | <b>Results</b>                | What is on the shelf: price per unit, how many left, which rack                           |
| 3 | <b>How many</b>               | The number. Nine tablets is 9                                                             |
| 4 | <b>of</b>                     | What that number counts — <i>tablets</i> or <i>strips of 10</i> . Remembered per medicine |
| 5 | <b>Stock came in — add it</b> | Puts stock on the shelf without leaving the bill                                          |
| 6 | <b>Bill items</b>             | Only QTY can be changed. The price comes from the batch                                   |
| 7 | <b>Net payable</b>            | What the customer pays. GST is already inside the MRP                                     |
| 8 | <b>Save &amp; print bill</b>  | Saves, deducts the stock, opens the preview                                               |

## Add medicine to the bill

| Control             | What it does                                                 |
|---------------------|--------------------------------------------------------------|
| <b>Medicine</b>     | Type part of the name. Enter searches                        |
| <b>Find</b>         | Runs the search                                              |
| <b>Results list</b> | Shows pack, maker, rack and stock. Click one                 |
| <b>Batch</b>        | <b>The nearest-expiry batch with stock is chosen for you</b> |
| <b>Qty (units)</b>  | <b>Tablets, not strips.</b> 5 sells five out of a strip      |
| <b>Disc %</b>       | Discount on this line                                        |
| <b>Add to bill</b>  | Adds the line                                                |

| Field               | Notes                                          |
|---------------------|------------------------------------------------|
| <b>Add to shelf</b> | Puts it in. You come straight back to the bill |

The grey line reads back what you have entered — "5 pack(s) × 10 = 50 tablets onto the shelf" — before anything is committed.

### What this costs you, and why it is worth it

Stock added this way has **no supplier bill behind it**, so total purchases will not tie out against total sales until that bill turns up. That is a deliberate trade: a counter that stops to do paperwork with a patient waiting is a counter nobody uses.

Nothing is hidden to buy that. Every entry is a proper goods-inward document with the quantity, the MRP, the date and who keyed it, and every one of them is listed under **Reports** → **Stock to reconcile** until it is matched to the real bill. You can square the books whenever you like — a week later, a month later — because nothing was done quietly.

## Bill items

| <b>QTY</b>                     | Base units. Editable         |
| <b>PACKS</b>                   | Reads back as 2 × 10 TAB + 3 |
| <b>MRP, DISC %</b>             | Editable                     |
| <b>GST %, AMOUNT</b>           | Calculated                   |
| ×                              | Removes the line             |

## Customer (right)

| Control                                 | Notes                                                       |
|-----------------------------------------|-------------------------------------------------------------|
| <b>Name</b>                             | Defaults to Cash . <b>A walk-in needs no patient record</b> |
| <b>Prescribed by</b>                    | Doctor's name. Required on the bill for a Schedule H1 drug  |
| <b>Or pull today's OPD prescription</b> | Pick a patient seen today                                   |
| <b>Load prescription</b>                | Puts every prescribed medicine that is in stock on the bill |

## Totals

|               |                                       |
|---------------|---------------------------------------|
| Gross         | what the MRP comes to                 |
| Discount      | anything taken off                    |
| Taxable value | the MRP with GST taken back out of it |
| CGST + SGST   | the tax, split in half                |
| Round off     | to the nearest rupee                  |
| NET PAYABLE   | what the customer hands over          |

| Control               | What it does                       |
|-----------------------|------------------------------------|
| Payment               | Cash, UPI or Card                  |
| Save & print bill     | Saves and opens the preview        |
| Save without printing | Saves only                         |
| Clear bill            | Empties the counter without saving |

### Every bill is settled in full

There is no credit and no part payment — by design, because the clinic does not offer them. A bill is paid before it is saved, so nothing is ever outstanding and there is no balance to chase.

### MRP already includes GST

Tax is never added on top. Ten strips at ₹112 MRP come to **exactly ₹1,120** — of which ₹1,000 is the taxable value and ₹120 is GST.

### A whole strip always costs what is printed on it

Five tablets from a ₹112 strip of ten cost ₹56. But a **full** strip costs ₹112, not ten times the rounded per-tablet price. This matters where the price does not divide evenly: ₹87.50 across fifteen tablets is ₹5.83 each, and the full strip still costs ₹87.50.

## 10. Patients

Search by **name, patient number or phone**. A phone number lists the whole family.

## The register (top left)

Patient no, name, phone, age, sex, allergies. Click a row to select it.

## Patient details (right)

| Field                        | Notes                                     |
|------------------------------|-------------------------------------------|
| <b>Patient no</b>            | Allocated on save, e.g. P00012            |
| <b>Name, Phone, Age, Sex</b> |                                           |
| <b>Address, Allergies</b>    | Optional                                  |
| <b>Save patient</b>          | Saves changes                             |
| <b>Remove</b>                | Refused if they have visits on record     |
| <b>+ New patient</b>         | Registers someone without booking a visit |

## History (bottom left)

**Visits & prescriptions** — every visit ever, with diagnosis, fee and receipt number. Select one, then:

- **Print prescription** — prints it however long ago it was
- **Print fee receipt** — prints the receipt again, marked DUPLICATE

**Medicine bills** — every bill for this patient, with **Print bill**.

This is where you go when someone returns weeks later having lost a receipt.

| <b>Schedule H1 register</b> | Statutory record of H1 sales. <b>Keep for three years</b> |

## Stock to reconcile

When the counter adds stock to serve a patient, there is no supplier bill behind it yet. Until there is, purchases will not tie out against sales — so every one of those entries is listed here with the date, medicine, batch, quantity on hand, MRP and the rate paid.

Work through it whenever it suits you. For each row, find the supplier bill it belongs to and check the quantity and the rate against it. A batch number starting **CTR-** was allocated by the system rather than read off the pack, so those are the ones worth checking against the real batch number.

The list is not a warning and does not have to be empty. It is a worklist.

## 12. Printing

Everything previews before any paper moves.

**Anything can be reprinted at any time.** A reprint is stamped **DUPLICATE** so it cannot be mistaken for the original.

## 13. Worked examples

Real situations, start to finish, with the numbers.

### Example 1 — Nine tablets out of a strip of ten

**A mother wants only nine Paracetamol.** A strip holds ten and costs ₹30.

| Step | What you do                                                                  |
|------|------------------------------------------------------------------------------|
| 1    | <b>Pharmacy counter</b> → type <code>parac</code>                            |
| 2    | Click <b>Paracetamol 500mg</b> . It says "590 tablets in stock · ₹3.00 each" |
| 3    | <b>How many</b> <code>9</code> , <b>of</b> <code>tablets</code>              |
| 4    | <b>Add to bill</b>                                                           |

#### What you get

- Bill line: `0 × 10 TAB + 9 tablets` , amount **₹27.00**
- Shelf: 590 → 581 tablets
- The opened strip has one tablet left in it, and the next customer gets that first

**Why not ₹270?** Because the medicine says ten tablets per pack, so a tablet costs ₹3.00, not ₹30.00. If it charged ₹270, that medicine has **Units in one pack** set to 1 — see task N.

### Example 2 — Two whole strips

Same medicine, but the customer wants two full strips.

**How many** `2` , **of** `strips of 10` → 20 tablets, **₹60.00**.

A full strip always costs exactly the MRP printed on it. Two strips is exactly twice that — never ₹59.90 or ₹60.10.

## Example 3 — The medicine is found but has no stock

A prescription asks for Cetirizine syrup. The counter shows it, greyed, with "out of stock" — but you can see the bottles on the shelf.

This is the commonest situation in a new system: the delivery arrived and nobody entered it.

| Step | What you do                                                                   |
|------|-------------------------------------------------------------------------------|
| 1    | Click the medicine anyway. The summary reads "Cetirizine 10mg · out of stock" |
| 2    | Click <b>Stock came in — add it</b>                                           |
| 3    | <b>Packs on the shelf</b> 5 , <b>MRP per pack</b> 85.00                       |
| 4    | Leave batch and expiry blank if you do not have them                          |
| 5    | <b>Add to shelf</b>                                                           |

### What you get

- Five bottles on the shelf, sellable immediately
- A batch numbered CTR-260727-1432 — allocated, not printed on the pack
- A line in **Reports** → **Stock to reconcile** until the supplier bill arrives

You are back on the same bill. Nothing was lost.

## Example 4 — The doctor prescribes something you do not stock

**Dolo syrup, which the shop has never carried.**

The doctor types the name and **does not** pick anything from the list. The hint reads "Not in our pharmacy — it will be written on the prescription only".

It is printed on the prescription and **never added to your medicine records**. At the counter, **Load prescription** names it: "Not added: Dolo Syrup". Tell the parent to buy it outside.

## Example 5 — A course that spans two batches

**Twenty tablets. The oldest batch holds seventeen.**

You type 20 . The counter splits it and tells you:

Paracetamol: 20 from 2 batches — 15 from PC1234, 5 from PC1180.

Two bill lines, because the batch number of what you actually hand over must be printed. The split falls at **fifteen, not seventeen**, so one whole strip is charged at the printed price and only five are loose — ₹116.65, the same as if one batch had covered it.

On the printed bill both lines sit under one **Paracetamol** heading, so it does not read as two separate items.

## Example 6 — Nine tablets, but only six left

You type **9**. Nothing is added, and it says:

*Only 6 tablets of Paracetamol 500mg left to sell.*

Sell the six, or add stock. It never quietly sells you fewer than you asked for.

## Example 7 — A sealed pack that cannot be split

**ORS sachets, sold as a box of ten, "Sell loose units" unticked.**

You type **7** and it refuses:

*ORS Powder is not sold loose — it goes out in whole packs of 10. Enter 10 for 1 pack.*

Untick that box on any medicine that must leave the shop whole.

## Example 8 — A whole visit

**Aarav, four years old, fever.**

| Step | Screen                             | What happens                                                                            |
|------|------------------------------------|-----------------------------------------------------------------------------------------|
| 1    | OPD → + <b>New visit</b>           | Booked, token 4                                                                         |
| 2    | Tile → <b>Fee</b>                  | ₹300 taken, receipt printed                                                             |
| 3    | Tile → <b>Consult</b>              | Fever, viral fever, three medicines prescribed                                          |
| 4    | Counter → <b>Load prescription</b> | Paracetamol added; Cetirizine reported <i>no stock</i> ; Dolo reported <i>not added</i> |
| 5    | <b>Stock came in — add it</b>      | Five bottles of Cetirizine on the shelf                                                 |
| 6    | <b>Load prescription</b> again     | Both now on the bill                                                                    |
| 7    | <b>Save &amp; print bill</b>       | 9 tablets + 1 bottle = <b>₹112.00</b>                                                   |

The parent buys the Dolo syrup outside. Everything else is on one bill, with batch numbers and expiry printed on it.

## 14. What the system will and will not do

Worth reading once. It is the difference between trusting a number and checking it.

### Situations it handles for you

| Situation                                               | What happens                                                                                          |
|---------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| <b>A child needs 9 tablets from a strip of 10</b>       | Priced per tablet, nine come off the shelf, and the bill shows 0 × 10 TAB + 9                         |
| <b>A course needs 20 but the oldest batch holds 15</b>  | Split across two batches, two lines, both batch numbers on the bill. Nearest expiry goes first        |
| <b>A course needs 20 and there are only 12</b>          | It bills 12 and says "Short: Amoxicillin (12 of 20)". It never quietly bills less without telling you |
| <b>A strip of 15 and a strip of 10 of the same drug</b> | Each batch prices against the pack it actually came in. Old stock is never repriced                   |
| <b>A medicine is prescribed that you do not stock</b>   | Written on the prescription, named at the counter, never added to your records                        |
| <b>A medicine has run out mid-queue</b>                 | Add it from the counter — see <a href="#">section 9</a>                                               |
| <b>Stock is expired</b>                                 | Never dispensed. It stays on the shelf listing so you can see it and return it                        |
| <b>A sealed pack that cannot be split</b>               | Untick <b>Sell loose units</b> and the counter insists on whole packs, telling you the number to type |
| <b>A Schedule H1 medicine</b>                           | Cannot be saved without the prescribing doctor. It goes in the register automatically                 |
| <b>Two people on one phone number</b>                   | Both appear when you search. You pick which child is here                                             |
| <b>The same supplier bill loaded twice</b>              | Refused. The invoice number is what stops it                                                          |
| <b>The same batch delivered again</b>                   | <b>Added</b> to what is there. Never replaced                                                         |
| <b>The count on the shelf is wrong</b>                  | Correct it with a reason. Every correction is recorded with was, now and why                          |
| <b>A printer is not attached</b>                        | Everything previews on screen first. Nothing is lost by not printing                                  |
| <b>The power goes off mid-bill</b>                      | Nothing is half-saved. A bill either exists completely or not at all                                  |

| Situation                         | What happens                                                         |
|-----------------------------------|----------------------------------------------------------------------|
| <b>Something unexpected fails</b> | It says so in plain words and keeps running. Your saved data is safe |

## Situations it does not handle — check these yourself

| Situation                                                   | What you need to know                                                                                                           |
|-------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>A customer returns medicine</b>                          | <b>There are no returns in this version.</b> Do it on paper and correct the stock count with reason <i>Other</i> and a note     |
| <b>Part payment, or paying later</b>                        | Not supported, on purpose. A bill is paid in full when it is saved                                                              |
| <b>Purchases balanced against sales</b>                     | Will <b>not</b> tie out while anything sits in <b>Reports → Stock to reconcile</b> . That list is the gap, and it is deliberate |
| <b>The rate paid on counter-added stock</b>                 | Defaults to zero, so anything added that way looks like pure margin until you fill the real rate in                             |
| <b>No discounts</b>                                         | The counter charges MRP. There is no discount box, by choice                                                                    |
| <b>A batch that expires next week</b>                       | Sold first, correctly, but you are not warned at the till. Watch <b>Expiring soon</b>                                           |
| <b>Two people billing at once</b>                           | One PC, one till. This is not built for two counters on the same data                                                           |
| <b>Changing units per pack after stock exists</b>           | Offered as a re-count, and you should accept it. Declining leaves the shelf being sold by the pack                              |
| <b>A medicine deleted or made inactive with stock on it</b> | It disappears from the counter but the stock is still counted in reports                                                        |
| <b>Anyone can do anything</b>                               | There are no logins or permissions. Everyone using the PC has the same rights                                                   |

### The one number to sanity-check daily

**Reports → the totals along the top.** The day's takings in the drawer should match pharmacy sales plus fees collected. A bill line can no longer be repriced, so a difference means cash was taken out or a bill was not saved — both worth finding on the day rather than at month end.

## 15. When something goes wrong

## The application does not close on an error

If something unexpected happens it tells you in plain words, writes the details to the log, and **keeps running**. A half-typed bill is not lost. You will see a message like:

*Taking the fee could not be completed. The change could not be saved — it may already exist, or a required field is missing. Nothing was changed.*

## Things it refuses on purpose

| It says                                 | Why                                                                  |
|-----------------------------------------|----------------------------------------------------------------------|
| "Only 3 × 10 TAB + 4 left of ..."       | You cannot sell stock you do not have                                |
| "Batch ... expired on ..."              | Expired medicine cannot be dispensed                                 |
| "3 people match that. Select which one" | Siblings share a phone; the wrong child is worse than a second click |
| "This patient has visits on record"     | Deleting them would orphan their bills                               |
| "Bill ... was already received on ..."  | Importing twice would double your stock                              |
| "No MRP" during import                  | The counter prices from MRP and cannot sell without one              |
| "Batch number is required"              | It has to appear on the bill by law                                  |

## Your data

Everything is in one file: `C:\ProgramData\TwinkleHMS\twinkle.db` . Copy that file and you have copied the clinic.

**Backups** are automatic — one per day into `C:\ProgramData\TwinkleHMS\backups` , keeping the last 14. That protects against mistakes, **not against the PC dying**. Copy the folder to a pen drive weekly.

**The log** is at `C:\HMS\Logs` , one file per day, 30 days kept. Settings has an **Open log folder** button and shows the exact path. Send that day's file when reporting a problem.

## Changing where things are kept

`appsettings.json` sits next to the application and can be edited in Notepad. Restart the application afterwards.

```
{
  "LogDirectory": "C:\\HMS\\Logs",
  "DatabasePath": null,
  "BackupsToKeep": 14,
  "LogDaysToKeep": 30
}
```

| Setting       | Notes                                                                                                    |
|---------------|----------------------------------------------------------------------------------------------------------|
| LogDirectory  | Where daily logs are written                                                                             |
| DatabasePath  | Full path to the database file. <code>null</code> uses <code>C:\ProgramData\TwinkleHMS\twinkle.db</code> |
| BackupsToKeep | Daily database backups kept before the oldest is deleted                                                 |
| LogDaysToKeep | Days of logs kept                                                                                        |

Use double backslashes in paths, as above.

If the folder cannot be written to — a locked-down PC, or a network drive that is offline — the application does **not** fail. It falls back to `C:\ProgramData\TwinkleHMS\logs`, and the first line of the log says which folder it wanted and which it used. The same applies to a settings file with a typo in it: built-in defaults are used and the log says so.

## Not in this version

Sales returns and credit notes · purchase returns · inter-state IGST · e-invoicing · multi-terminal use · the Schedule X narcotic register.

**Credit and part payment are not missing — they are deliberately absent.** The clinic settles every bill in full at the counter, so there is no outstanding balance anywhere in the system and nothing to reconcile.

The GST arithmetic and the invoice layout are correct for a retail counter, but this is not a certified e-invoicing integration. Have a CA review the GST summary before it feeds a return, and confirm register formats with your local drug inspector.
