

Twinkle Children's Hospital

User guide

For the front desk, the doctor, and the pharmacy counter.

Every screenshot is taken from the running application. To refresh them all after a change, run the one test that produces them:

```
dotnet test tests/Pharma.UiTests --filter ScreenshotCapture
```

Contents

Getting started

1. The window
2. Settings — set this up first

The OPD desk 3. The OPD screen 4. Booking a visit 5. The consultation

The pharmacy 6. Medicines — the catalogue 7. Inventory — what is on the shelf 8. Importing a supplier bill 9. The pharmacy counter

Everything else 10. Patients 11. Reports 12. Printing 13. When something goes wrong

Common tasks, step by step — the short version of everything above. Start here if you just want to get through a day.

Common tasks, step by step

Each task below is complete on its own. Screen-by-screen detail follows in sections 1 to 13.

A. Set the clinic up — once, before anything else

1. Click **Settings**.
2. Fill in **clinic name**, **address**, **phone**.
3. Tick **Registered for GST** only if the clinic actually is. Then enter the **GSTIN**. Leave it unticked and bills print as a plain invoice.
4. Enter the **drug licence number** and the **pharmacist's name**.
5. Click **Save shop details**.

6. On the right, enter the first **doctor** — name, speciality, registration number, usual fee — and click **Save doctor**.

You cannot book a visit until at least one doctor exists.

B. Book a walk-in patient

1. Click **OPD**, then **+ New visit**.
2. Type the patient's **name or phone number** and press Enter.
3. If they are listed, **click the right person**. If a whole family shares the phone, everyone on it appears — pick the child who is actually here.
4. If nobody matches, the new-patient form opens. Enter **name, phone, age, sex**.
5. Choose the **doctor**, adjust **time** and **fee** if needed.
6. Type the **complaint** if you want it on the tile and the prescription.
7. Click **Book visit**. A token number is allocated.

C. Take the consultation fee

1. On the **OPD** screen, find the patient's tile in **Waiting**.
2. Set **Fee taken as** to Cash, UPI or Card.
3. Click **Fee** on the tile.
4. The receipt preview opens — click **Print**, or **Close** to skip printing.

The badge changes to **Fee paid**. Clicking Fee twice does nothing.

D. See a patient and write a prescription

1. Click **Consult** on the patient's tile.
2. Fill in **vitals, complaint, diagnosis, advice** — all optional.
3. For each medicine:
 - Type two letters or more into **Medicine**.
 - **Click a match** to use one you stock, or keep typing for one you do not.
 - Enter the **dose**.
 - Set **Morning · Afternoon · Night** from the three lists — **0** , **1/4** , **1/2** , **1** or **2** . One in the morning and one at night is **1** , **0** , **1** .
 - Enter **days**.
 - **Qty is filled in for you** in individual tablets — change it if you want.
 - Click **Add**.
4. Set a **review date** if there is one.
5. Click **Save & complete**. The tile moves to **Completed**.

The consultation covers the whole window while it is open, and the rest of the app waits behind it. Nothing else can be started until you leave, so a consultation cannot be opened and then forgotten. **Close** or the **Esc** key leaves it; if anything has been typed and not saved you are asked first.

E. Add a new medicine and put stock on the shelf

This is two jobs on two screens. **Medicines** is where a medicine is described, once. **Inventory** is where stock arrives, every delivery.

First, describe the medicine — Medicines screen

1. Click **Medicines**, then + **New medicine**.
2. Enter the **brand name** as printed on the pack — *Calpol*.
3. Enter the **drug / generic name** — *Paracetamol 250mg*. Staff search by either, so filling both is worth the few seconds.
4. Enter the **manufacturer** and **pack size** as printed.
5. Set **Sold as** — tablet, capsule, bottle, sachet.
6. Set **Units in one pack** — **15** for a strip of fifteen, **1** for a bottle.
7. Set **GST %**, **schedule**, **rack** and **reorder level**.
8. Click **Save medicine**.

Then, put stock on the shelf — Inventory screen

9. Click **Inventory**, type the name in the search box and click **Search**.
10. Click the medicine in the list. The heading names it and says how much is on hand.
11. In **Receive stock**, enter **batch no**, **expiry**, **packs received**, any **free** packs, the **rate** you paid and the **MRP** printed on the pack.
12. Check the line that appears — "*20 pack(s) × 15 = 300 tablets onto the shelf*".
13. Click **Add stock**.

F. Load a supplier's file instead of typing it

1. Click **Inventory**, then **Import supplier bill**.
2. Choose the **supplier profile** that matches their format.
3. Click **Browse...** and pick the file. It is read immediately.
4. Type the **supplier name** — the file does not contain it.
5. Check the grid, especially **PER PACK**. **30s** reads as 30; **60ML** stays 1. **Type the real number for any strip**.
6. Read the notices underneath — bill date, MRP changes, anything unclear.
7. Click **Import**.

Stock is **added** to what is already there. The same bill cannot be imported twice.

G. Sell to someone who walks in

1. Click **Pharmacy counter**.
2. Type part of the medicine name and press Enter.
3. **Click the medicine** in the results.
4. Enter **Qty (units)** — individual tablets, not strips.

5. Click **Add to bill**. Repeat for each medicine.
6. Leave the customer as **Cash**, or type their name.
7. Choose **Payment**, then **Save & print bill**.

H. Sell part of a strip

Exactly as task G — just enter the number of **tablets**. Five out of a strip of ten is **5**. The **PACKS** column shows what to hand over, and the price is proportional. A full strip always costs exactly the MRP printed on it.

I. Dispense what a doctor prescribed

1. Click **Pharmacy counter**.
2. Under **Or pull today's OPD prescription**, choose the patient.
3. Click **Load prescription**. Everything prescribed **and in stock** is added with the right quantity.
4. Anything missing is named on screen — tell the parent to buy it outside.
5. Choose **Payment**, then **Save & print bill**.

J. Correct a stock count

1. Click **Inventory** and select the medicine.
2. In **Correct the stock count**, choose the **batch**.
3. Enter the **true count** — what is actually on the shelf, in units.
4. Choose a **reason**: recount, breakage, expired, lost, entry error.
5. Add a **note** if it is unusual.
6. Click **Correct count**.

Every correction is recorded underneath with was, now and why.

K. Print something again, however long ago

1. Click **Patients** and search by name or phone.
2. Select the patient.
3. **Visits & prescriptions** tab → select the visit → **Print prescription** or **Print fee receipt**.
4. **Medicine bills** tab → select the bill → **Print bill**.

For a walk-in with no patient record: **Reports** → **Day book** → **Find any bill**, search the bill number or customer name across all dates, then **Reprint**.

L. Close the day

1. Click **Reports**.
2. Check the totals along the top — pharmacy sales, cash, UPI, fees collected.
3. **Day book** — every bill of the day.

4. **GST summary** — only if registered.
5. **Expiring soon** — return these to the distributor.
6. **Low stock** — what to order.
7. **Schedule H1 register** — keep for three years.

1. The window

Seven screens down the left. The one you are on is highlighted.

Button	What it is for
OPD	The day's queue. Book visits, take fees, open consultations
Patients	Everyone ever registered, with their whole history
Pharmacy counter	Selling medicines
Medicines	The catalogue — what each medicine is. Set up once
Inventory	Stock — what is on the shelf. Receiving, batches, corrections
Reports	End of day, GST, expiry, low stock
Settings	Clinic details, doctors, screen layout

Medicines and Inventory are deliberately separate. Describing a medicine is a one-off job usually done by whoever sets the shop up; receiving stock happens every delivery and is done at the counter. Keeping them apart means neither screen is crowded with the other's fields.

Some screens — the consultation, importing a bill, a print preview — cover the window while they are open, and the rest of the app waits behind them. This is on purpose: nothing can be half-started and then forgotten.

The heading of every screen shows the screen name and a one-line summary underneath — for example "2 waiting · 1 completed · Sun, 26 Jul".

At the bottom left it reminds you where the data lives and that a backup is taken each day the application is opened.

2. Settings — set this up first

Everything here prints on your bills, receipts and prescriptions.

Twinkle Children's Hospital — OPD & Pharmacy

Shop details (left card)

Control	What to enter
Clinic / shop name	Printed largest, at the top of every document
Address	One line, under the name
Phone	Shown beside the address
Registered for GST	Off by default. See below — this changes what your bills are
GSTIN	Your GST number. Only enabled when registered
Drug licence no	Your 20B/21B number. Required on a chemist's bill
Pharmacist	Printed at the foot of the bill
OPD queue layout	Tiles or Rows — see section 3
Bill footer	Free text at the bottom of a bill, e.g. "Get well soon"
Save shop details	Applies everything above. New documents use it immediately

Below the button it shows the **database file** and the **activity log** path, with an **Open log folder** button. You need those only if reporting a problem.

The application works with these blank — the GSTIN line simply does not print. Fill them in before you issue a real bill to a customer.

Registered for GST, or not

This one setting changes what your bills legally are.

	Registered off	Registered on
Bill is headed	INVOICE	TAX INVOICE
GSTIN printed	no	yes
GST charged	none	extracted from the MRP
GST column and summary	hidden	shown

It is **off by default on purpose**. Issuing a document headed "tax invoice", with a GSTIN on it, when you are not registered is a false statement — so switching it on has to be a deliberate act.

Turning it on later does not rewrite old bills. Each bill remembers what it was when it was issued, so a reprint always shows what the customer was given.

Doctors (right card)

Control	What it does
List	Every doctor. Click one to edit it
Name	Appears as an OPD tab and on the prescription
Speciality	Printed under the doctor's name on the prescription
Registration no	Printed on the prescription. Required on a real one
Default consultation fee	Fills in automatically when booking for this doctor
Save doctor	Saves the one being edited
+ New doctor	Clears the form to add another

At least one doctor is needed before any visit can be booked.

3. The OPD screen

Top row

Control	What it does
All doctors tab	Shows every patient in the clinic
Doctor tabs	One per doctor. Shows only their patients
+ New visit	Opens the booking panel on the right
Date	Which day you are looking at. Defaults to today

The doctor is a tab rather than a column on each patient, which is why the tiles stay small.

The two columns

Waiting — everyone still to be seen. **Completed** — everyone finished.

A patient moves from one to the other and can be moved back.

What a waiting tile shows

On the tile	Meaning
Green number	Token number. What you call out

On the tile	Meaning
Name	The patient
4F • 08:55	Age, sex, and the time they were booked
Grey line	What they came in with
Fee paid / Fee due	Green if the consultation fee is taken, amber if not
just arrived / waiting 12m	How long they have been sitting there

Buttons on a waiting tile

Button	What it does
Consult	Opens the consultation window for this patient
Fee	Takes the consultation fee, issues a numbered receipt, offers to print it
Done	Moves the tile to Completed without a consultation
Cancel	Cancels the visit. Asks first

Buttons on a completed tile

Button	What it does
Rx	Prints the prescription. Says so if there isn't one
Receipt	Prints the fee receipt again, marked DUPLICATE
Reopen	Moves the patient back to Waiting

Choosing tiles or rows

Set in Settings. Tiles are easier to read across a room; rows fit more people on screen when the clinic is busy.
Everything works the same in either.

4. Booking a visit

Click **+ New visit**. The panel opens on the right, in three numbered steps.

Step 1 — find the patient

Control	What it does
Search box	Type a name or a phone number. Enter also works
Find	Runs the search
Results list	Everyone matching. Click the right one
+ New patient	Opens the form below to register someone new

If nobody matches, the new-patient form opens by itself with what you typed already filled in.

New patient field	Notes
Name	The only one that is required
Phone	The parent's number. Shared across siblings is normal
Age	In years
Sex	Male, Female or Other
Back to search	Returns to the list without adding anyone

Step 2 — doctor and time

Control	Notes
Doctor	Defaults to whichever tab you were on
Time	24-hour, e.g. 09:45 . Defaults to now
Fee	Defaults to that doctor's usual charge

Step 3 — complaint

Optional. Whatever you type shows on the queue tile and on the prescription.

Then **Book visit**. A token number is allocated automatically and the panel closes. **Fee taken as** below the button sets the payment method used when you later click **Fee** on the tile.

One phone, several children

A parent's number covers the whole family. Typing it lists **every child** registered against it, and the message says so: "3 people are registered on this number. Select which one is here."

The number is matched on its digits, so 9008007001 , +91 90080 07001 and 90080 07001 all find the same family.

If you click **Book visit** without choosing one, the application **stops you** rather than quietly registering a fourth child who already exists.

5. The consultation

Click **Consult** on a tile.

The screenshot shows a web application window titled "Twinkle Children's Hospital — OPD & Pharmacy". The main form is titled "Token 1 · Baby Anika · 4M · Dr. A. Kumar". It is divided into two main sections: "Vitals" and "Prescription".

Vitals Section:

- Weight kg:
- BP:
- Temp °F:
- Complaint:
- Diagnosis:
- Advice / notes:
- Fee:
- Review on: ☐

Prescription Section:

- Medicine:
- Dose:
- Morning · Afternoon · Night:
- Days:
- Qty (units):
-

Table:

MEDICINE	DOSE	FREQUENCY	DAYS	DISPENSE	INSTRUCTIONS

Buttons: Close, Save, Print prescription, Save & complete

The heading shows the token, the patient, their age and sex, and the doctor.

Left — clinical notes

Control	Notes
Weight kg, BP, Temp °F	Vitals. All optional

Control	Notes
Complaint	Carried over from booking; edit freely
Diagnosis	Printed in bold on the prescription
Advice / notes	Printed under the medicines
Fee	Can be changed here
Review on	Follow-up date. Printed as "Review on 01 Aug 2026"

Right — the prescription

Fill the form at the top and press **Add**. Each medicine then appears in the list below.

Control	Notes
Medicine	Type two letters or more to search our pharmacy. Matches appear underneath — click one to use it
Dose	e.g. 5 ml , 1 tab
Morning · Afternoon · Night	Three lists: 0 , 1/4 , 1/2 , 1 , 2 . Pick how many at each time of day
Days	Length of the course
	<i>Nothing is filled in for you — a dose is the doctor's decision, not the software's</i>
Qty (units)	Individual tablets. Worked out for you — change it if you want
Grey line under the fields	What the course comes to, in tablets and in strips
Instructions	e.g. "after food". Printed under the line
Add	Adds the medicine to the list
✕ in the list	Removes that medicine

The three lists replace the old typed frequency box. 1-0-1 was quick for anyone who already knew the notation and a guess for everyone else; picking from three lists cannot be mistyped, and the prescription still prints in the familiar 1-0-1 form.

Frequency and days are **kept after adding**, because a prescription usually repeats the same course — only the medicine changes.

Quantity is always in individual units

You pick **1**, **0**, **1** for **3** days and it fills in **6** — six tablets, not six strips. The line underneath shows what the pharmacy will hand over, e.g. "6 units · 1 × 10 TAB minus 4", so there is never any doubt about whether a number means tablets or strips.

SOS and **PRN** have no fixed daily dose, so nothing is filled in and you type the quantity yourself.

Prescribing something the clinic does not stock

Type the name and simply **do not pick anything from the list**. The line reads "Not in our pharmacy — it will be written on the prescription only", and it is added exactly as typed. The parent buys it from an outside chemist.

It is never added to our medicine records. A name typed on a prescription does not create a medicine, a batch, or a price — our catalogue only ever grows when stock is received.

A medicine you **do** pick from the list shows "In our pharmacy · 60 in stock" and can be pulled straight onto a bill at the counter, with the quantity already correct. One prescription can mix the two freely.

Bottom buttons

Button	What it does
Close	Leaves the consultation. Asks first if anything is unsaved
Save	Keeps everything. Patient stays in Waiting
Print prescription	Saves, then opens the print preview
Save & complete	Saves and moves the tile to Completed

The **Esc** key does the same as **Close**. While the consultation is open the rest of the app is greyed out and waits — you cannot wander off to another screen with a half-written prescription behind you.

6. Medicines — the catalogue

What each medicine **is**. Set up once per medicine; stock is the next screen.

The catalogue (left)

Search box, **Search** and **+ New medicine**. The grid shows medicine, drug, pack, maker, rack, GST %, schedule, units per pack, and stock on hand. Click a row to load it into the form on the right.

Search matches the **brand name**, the **drug name**, the manufacturer and the rack. Typing `paracetamol` finds Calpol; typing `calpol` finds it too.

Medicine details (right)

Field	Notes
Brand name	What is printed on the pack — <i>Calpol</i> . The only required field
Drug / generic name	The drug itself — <i>Paracetamol 250mg</i> . Searched as well
Manufacturer	Company name
Pack size	As printed, e.g. <code>10 TAB</code> , <code>60ML</code>
HSN	Tax code. <code>3004</code> covers most formulations
GST %	Usually 5 or 12
Schedule	<code>None</code> , <code>H</code> , <code>H1</code> , <code>X</code> . H1 sales are recorded in a register
Rack	Where it sits on the shelf. Searchable

Field	Notes
Reorder level	Below this it appears in the Low stock report
Units per pack	10 for a ten-tablet strip. 1 for a syrup bottle
Sell loose units	Allows part of a strip to be sold
Active	Uncheck to hide it from the counter
Save medicine	Saves it

Units per pack is what makes loose sale work

Set it to **10** for a strip of ten tablets and stock is counted in **tablets**, so a customer can buy five. Leave it at **1** for a syrup bottle — half a bottle is not a thing you can sell.

7. Inventory — what is on the shelf

Everything to do with stock: receiving it, seeing the batches, correcting a count. Nothing here changes what a medicine *is* — that is the Medicines screen.

Twinkle Children's Hospital — OPD & Pharmacy

Correct the stock count

Batch

True count Reason

Notes

Data is stored on this PC. A backup is taken each day it is opened.

Finding the medicine (left)

Type any part of the brand name, drug name, maker or rack and click **Search**, then click the row. The heading at the top of the screen then names the medicine and how much is on hand, so you always know what you are about to change.

Import supplier bill sits next to Search — see [section 8](#).

Receive stock (top right)

This is the only way stock enters, and it always creates a batch.

Field	Notes
Batch no	Printed on the pack. Required — it goes on the bill by law
Expiry	The pack is good until the end of that month
Packs	How many packs arrived — strips, boxes, bottles
Free	Scheme quantity, the "+1" in 10+1. Adds to stock, costs nothing
Rate	What the hospital paid per pack
MRP	The price printed on the pack. The counter prices from this
Supplier, Supplier bill no	For your records
Add stock	Adds it

Packs in, units out

Under the quantity boxes a grey line reads back what you have entered: *"20 pack(s) × 15 = 300 tablets onto the shelf"*. You count deliveries in strips, the counter sells tablets, and this is the one place the two meet — so it says so out loud rather than leaving you to trust it.

The form clears whenever you pick a different medicine, so a price or expiry from the last delivery can never be carried onto the wrong batch.

Batches on the shelf lists every batch of the selected medicine with its expiry, MRP and quantity left.

Adding stock always adds. Receiving the same batch number again increases what is on the shelf. It never replaces it.

Correct the stock count

For when the shelf and the screen disagree — breakage, a miscount, or something keyed in wrongly.

Control	Notes
Batch	Which batch is wrong. Shows expiry, MRP and current count
True count	What is actually on the shelf, in units
Reason	Recount , Breakage , Expired , Lost , Entry error , Other
Notes	Free text — worth writing for anything unusual
Correct count	Applies it
Recent corrections	When, what, was, now, change, reason and notes

Every correction is recorded

Stock otherwise only moves by receiving or selling, and both leave a document. A manual correction has none, so it writes its own — otherwise a shortfall looks the same as theft and nobody can say what happened.

The correction and its record are saved together: you cannot get one without the other. Setting the count to what it already is is refused, and stock cannot go below zero.

8. Importing a supplier bill

Instead of keying in a delivery line by line, load the file your supplier sends. **Inventory** → **Import supplier bill**.

Import a supplier bill

Supplier profile

New medicine	CALPOL PED DROPS	15ML	1	NA497	01/2028	5	0	5	23.60	30.98	5.0
New medicine	CALPOL PED DROPS	15ML	1	NA504	01/2028	5	0	5	23.60	30.98	5.0
New medicine	CIPLOX EYE DROPS CIPLA	5ML	1	6A40064	01/2028	25	0	25	12.56	16.48	5.0
New medicine	DD NORM 1GR SACHET	1GR	1	4315DN002	11/2027	50	10	60	33.52	44.00	5.0
New medicine	FERRO POPS IRON GUMMIES	30s	30	FP2/25/079	05/2027	20	10	900	473.88	621.97	5.0
New medicine	MEFTAGESIC DS SYRUP	60ML	1	ZQL2632	02/2028	9	1	10	51.81	68.00	5.0

What the file says

	LINE	FIELD	DETAIL
Info	2	BillDate	'04-07-2026' read as 04 Jul 2026. Check this is right before importing.
Info	2	Mrp	CALCIMAX-P SYP: MRP up from 187.00 to 192.00. Stock already on the shelf keeps its own MRP.

Ready to import. Stock will be added to what is already on the shelf.

Close

Import

Step 1 — choose the profile and the file

Control	What it does
Supplier profile	Which supplier's format this is. Each knows that supplier's date and expiry style
File	The path. Use Browse
Supplier name	Type this — the file does not contain it
Browse...	Pick the file. Reads it immediately
Read file	Re-reads it after changing the profile

Step 2 — check what it will do

The summary line reads, for example: "Bill SW02236 dated 04 Jul 2026 · 9 line(s) · 9 new medicine(s) · 1042 unit(s) · net ₹15334.00"

Column	Meaning
STATUS	Matched — found in your catalogue · Check — a likely match, confirm it · New medicine — will be created

Column	Meaning
MEDICINE, PACK, BATCH, EXPIRY	As the supplier sent them
PER PACK	Editable. Units in one pack
QTY, FREE	Packs billed, and free packs
UNITS	What will land on the shelf: (qty + free) × per pack
RATE, MRP, GST	Cost, printed price, tax rate

What the file says below lists everything worth knowing — the bill date it read, MRP changes, anything it could not understand.

Check the PER PACK column

The file rarely states how many are in a pack. `30s` is read as 30 gummies. `60ML` is one bottle and stays `1` — a syrup is not sixty sellable units.

For strips, **type the real number** before importing. Correct it once and the medicine remembers it.

Step 3 — import

Import writes everything in one go. **Close** abandons it — nothing is written until you click Import.

Afterwards it reports: *"Imported as GRN00003: 9 line(s), 9 new medicine(s), 1042 unit(s) added to stock."*

What the import guarantees

- **Stock is added**, never replaced. 12 counted by hand plus 5 on the bill is 17
- **The same bill cannot be imported twice.** It is refused by bill number
- **Nothing is written if anything fails.** All of it, or none
- **The supplier's product codes are remembered**, so their next bill matches by itself

QTY	Base units. Editable

Column	Notes
PACKS	Reads back as 2 × 10 TAB + 3
MRP, DISC %	Editable
GST %, AMOUNT	Calculated
×	Removes the line

Customer (right)

Control	Notes
Name	Defaults to Cash . A walk-in needs no patient record
Prescribed by	Doctor's name. Required on the bill for a Schedule H1 drug
Or pull today's OPD prescription	Pick a patient seen today
Load prescription	Puts every prescribed medicine that is in stock on the bill

Totals

Gross	what the MRP comes to
Discount	anything taken off
Taxable value	the MRP with GST taken back out of it
CGST + SGST	the tax, split in half
Round off	to the nearest rupee
NET PAYABLE	what the customer hands over

Control	What it does
Payment	Cash, UPI or Card
Save & print bill	Saves and opens the preview
Save without printing	Saves only
Clear bill	Empties the counter without saving

Every bill is settled in full

There is no credit and no part payment — by design, because the clinic does not offer them. A bill is paid before it is saved, so nothing is ever outstanding and there is no balance to chase.

MRP already includes GST

Tax is never added on top. Ten strips at ₹112 MRP come to **exactly ₹1,120** — of which ₹1,000 is the taxable value and ₹120 is GST.

A whole strip always costs what is printed on it

Five tablets from a ₹112 strip of ten cost ₹56. But a **full** strip costs ₹112, not ten times the rounded per-tablet price. This matters where the price does not divide evenly: ₹87.50 across fifteen tablets is ₹5.83 each, and the full strip still costs ₹87.50.

10. Patients

The screenshot shows the 'Twinkle Children's Hospital — OPD & Pharmacy' application. The left sidebar contains navigation links: OPD, Patients (highlighted), Pharmacy counter, Medicines, Inventory, Reports, and Settings. The main area is titled 'Patients' and shows '1 patient(s) listed'. At the top, there is a search bar with 'Baby Anika' entered, a 'Search' button, and a '+ New patient' button. Below this is a table with columns: PATIENT NO, NAME, PHONE, AGE, SEX, and ALLERGIES. The table contains one row for 'Baby Anika' with patient number P00001, phone 9008007001, age 4, and sex Male. To the right of the table is a 'Patient details' panel with fields for Patient no (P00001), Name (Baby Anika), Phone (9008007001), Age (4), Sex (Male), Address, and Allergies. At the bottom of this panel are 'Save patient' and 'Remove' buttons. Below the table, there are tabs for 'Visits & prescriptions' and 'Medicine bills'. The 'Visits & prescriptions' tab is active, showing a table with columns: DATE, VISIT NO, DOCTOR, I, RX, FEE, RECEIPT, and STATUS. The first row shows a visit on 26 Jul 2026 at 20:37, visit number V00001, doctor Dr. A. Kumar, 0 RX, fee 300.00, receipt RCP00001, and status InConsultation. At the bottom of the visits section are 'Print prescription' and 'Print fee receipt' buttons. A footer note states: 'Data is stored on this PC. A backup is taken each day it is opened.'

PATIENT NO	NAME	PHONE	AGE	SEX	ALLERGIES
P00001	Baby Anika	9008007001	4	Male	

DATE	VISIT NO	DOCTOR	I	RX	FEE	RECEIPT	STATUS
26 Jul 2026 20:37	V00001	Dr. A. Kumar		0	300.00	RCP00001	InConsultation

Search by **name, patient number or phone**. A phone number lists the whole family.

The register (top left)

Patient no, name, phone, age, sex, allergies. Click a row to select it.

Patient details (right)

Field	Notes
Patient no	Allocated on save, e.g. P00012
Name, Phone, Age, Sex	
Address, Allergies	Optional
Save patient	Saves changes
Remove	Refused if they have visits on record
+ New patient	Registers someone without booking a visit

History (bottom left)

Visits & prescriptions — every visit ever, with diagnosis, fee and receipt number. Select one, then:

- **Print prescription** — prints it however long ago it was
- **Print fee receipt** — prints the receipt again, marked DUPLICATE

Medicine bills — every bill for this patient, with **Print bill**.

This is where you go when someone returns weeks later having lost a receipt.

11. Reports

Across the top for the chosen date: pharmacy sales, cash, UPI, consultation fees collected, and OPD visits.

Tab	What it is for
Day book	Every bill for the day. Find any bill searches every date by bill number or customer name. Reprint selected bill prints it again
GST summary	Taxable value, CGST and SGST grouped by rate — what a return needs
OPD register	Every visit, diagnosis, fee, and whether it was paid
Expiring soon	Batches within 90 days of expiry. Return these to the distributor
Low stock	Anything at or below its reorder level
Schedule H1 register	Statutory record of H1 sales. Keep for three years

12. Printing

Everything previews before any paper moves.

Print preview — Receipt RCP00001 (duplicate)

Twinkle Children's Hospital
GSTIN: 36ABCDE1234F1Z5
CONSULTATION RECEIPT

Receipt No: RCP00001	Date: 26 Jul 2026 20:37
Patient: Baby Anika (4M)	Patient No: P00001
Doctor: Dr. A. Kumar	Token: 1 Visit: V00001

PARTICULARS	AMOUNT
Consultation fee — Paediatrics	300.00

RECEIVED ₹300.00
Paid by Cash

Rupees Three Hundred only

Consultation services. Fees once paid are not refundable.

DUPLICATE

1 of 1

Receipt RCP00001 (duplicate)

Close
Print

Print sends it. **Close** goes back. If no printer is set up the application says so plainly instead of failing, and you can still preview.

Document	Number	Print it from
Tax invoice (medicines)	INV00001	Counter · Reports day book · patient record
Consultation receipt	RCP00001	OPD tile · patient record

Document	Number	Print it from
Prescription	V00001	Consultation · OPD tile · patient record

Anything can be reprinted at any time. A reprint is stamped **DUPLICATE** so it cannot be mistaken for the original.

13. When something goes wrong

The application does not close on an error

If something unexpected happens it tells you in plain words, writes the details to the log, and **keeps running**. A half-typed bill is not lost. You will see a message like:

Taking the fee could not be completed. The change could not be saved — it may already exist, or a required field is missing. Nothing was changed.

Things it refuses on purpose

It says	Why
"Only 3 × 10 TAB + 4 left of ..."	You cannot sell stock you do not have
"Batch ... expired on ..."	Expired medicine cannot be dispensed
"3 people match that. Select which one"	Siblings share a phone; the wrong child is worse than a second click
"This patient has visits on record"	Deleting them would orphan their bills
"Bill ... was already received on ..."	Importing twice would double your stock
"No MRP" during import	The counter prices from MRP and cannot sell without one
"Batch number is required"	It has to appear on the bill by law

Your data

Everything is in one file: `C:\ProgramData\TwinkleHMS\twinkle.db` . Copy that file and you have copied the clinic.

Backups are automatic — one per day into `C:\ProgramData\TwinkleHMS\backups` , keeping the last 14. That protects against mistakes, **not against the PC dying**. Copy the folder to a pen drive weekly.

The log is at `C:\HMS\Logs` , one file per day, 30 days kept. Settings has an **Open log folder** button and shows the exact path. Send that day's file when reporting a problem.

Changing where things are kept

`appsettings.json` sits next to the application and can be edited in Notepad. Restart the application afterwards.

```
{
  "LogDirectory": "C:\\HMS\\Logs",
  "DatabasePath": null,
  "BackupsToKeep": 14,
  "LogDaysToKeep": 30
}
```

Setting	Notes
<code>LogDirectory</code>	Where daily logs are written
<code>DatabasePath</code>	Full path to the database file. <code>null</code> uses <code>C:\ProgramData\TwinkleHMS\twinkle.db</code>
<code>BackupsToKeep</code>	Daily database backups kept before the oldest is deleted
<code>LogDaysToKeep</code>	Days of logs kept

Use double backslashes in paths, as above.

If the folder cannot be written to — a locked-down PC, or a network drive that is offline — the application does **not** fail. It falls back to `C:\ProgramData\TwinkleHMS\logs`, and the first line of the log says which folder it wanted and which it used. The same applies to a settings file with a typo in it: built-in defaults are used and the log says so.

Not in this version

Sales returns and credit notes · purchase returns · inter-state IGST · e-invoicing · multi-terminal use · the Schedule X narcotic register.

Credit and part payment are not missing — they are deliberately absent. The clinic settles every bill in full at the counter, so there is no outstanding balance anywhere in the system and nothing to reconcile.

The GST arithmetic and the invoice layout are correct for a retail counter, but this is not a certified e-invoicing integration. Have a CA review the GST summary before it feeds a return, and confirm register formats with your local drug inspector.
